

# CALCULATE FALL CLEARANCE LIKE A PRO

It is vitally important that fall clearance is properly calculated before working at height. Because, guessing is for rookies.

## CALCULATION

When tying off overhead with a shock absorbing lanyard, the required fall clearance distance (FC) is  $= A + B + C + D$ .

Lanyard length  
(Example = 6 feet)

Maximum deceleration distance of the lanyard  
(3.5 feet is the OSHA requirement)

Height of the suspend worker  
(Typically = 6', factoring in D-ring slide and harness stretch)

Safety factor (3 feet is the industry standard)

To be safe the distance between your anchor point and the nearest obstruction must be  $> FC$

Nearest obstruction.

This poster illustrates a common method of calculating fall clearance using an energy absorbing lanyard. Fall clearance required varies by the type of connecting device and its performance specifications. Refer to the manufacturer's instructions for complete details for calculating fall clearance to ensure maximum safety on the jobsite.
