Modern Directional Statistics Christophe Ley, Thomas Verdebout, 2017-08-03 Modern Directional Statistics collects important advances in methodology and theory for directional statistics over the last two decades. It provides a detailed overview and analysis of recent results that can help both researchers and practitioners. Knowledge of multivariate statistics eases the reading but is not mandatory. The field of directional statistics has received a lot of attention over the past two decades due to new demands from domains such as life sciences or machine learning to the availability of massive data sets requiring adapted statistical techniques and to technological advances. This book covers important progresses in distribution theory, high dimensional statistics, kernel density estimation, efficient inference on directional supports, and computational and graphical methods.

Measurement Error and Misclassification in Statistics and Epidemiology

Paul Gustafson, 2003-09-25 Mismeasurement of explanatory variables is a common hazard when using statistical modeling techniques and particularly so in fields such as biostatistics and epidemiology where perceived risk factors cannot always be measured accurately. With this perspective and a focus on both continuous and categorical variables, *Measurement Error and Misclassification in Statistics and Epidemiology: Impacts and Bayesian Adjustments* examines the consequences and Bayesian remedies in those cases where the explanatory variable cannot be measured with precision. The author explores both measurement error in continuous variables and misclassification in discrete variables and shows how Bayesian methods might be used to allow for mismeasurement. A broad range of topics from basic research to more complex concepts such as wrong model fitting make this a useful research work for practitioners, students and researchers in biostatistics and epidemiology.
