Driving Sustainability through Engineering Management and Systems

Engineering Simon P. Philbin,2021-09-08 Despite the ongoing impact of the COVID 19 pandemic the challenge of realizing sustainability across the triple bottom line of social environmental and economic development remains an urgent priority If

anything it is now imperative that we work towards achieving the United Nations Sustainable Development Goals SDGs. However, the global challenges are significant. Many of the societal challenges represent complex problems that require multifaceted solutions drawing on multidisciplinary approaches. Engineering management involves the management of people and projects related to technological or engineering systems; this includes project management, engineering economy, and technology management, as well as the management and leadership of teams. Systems engineering involves the design, integration, and management of complex systems over the full life cycle; this includes requirements capture and integrated system design, as well as modelling and simulation. In addition to the theoretical underpinnings of both disciplines, they also provide a range of tools and techniques that can be used to address technological and organisational complexity. The disciplines of engineering management and systems engineering are therefore ideally suited to help tackle both the challenges and the opportunities associated with realising a sustainable future for all. This book provides new insights on how engineering management and systems engineering can be utilised as part of the journey towards sustainability. The book includes a discussion of a broad range of different approaches to investigate sustainability through utilising quantitative, qualitative, and conceptual methodologies. The book will be of interest to researchers and students focused on the field of sustainability, as well as practitioners concerned with devising strategies for sustainable development. **Harper's Weekly**

Mouftah, Melike

Erol-Kantarci, Mubashir Husain Rehmani, 2018-12-28 With the increasing worldwide trend in population migration into urban centers, we are beginning to see the emergence of the kinds of mega cities which were once the stuff of science fiction. It is clear to most urban planners and developers that accommodating the needs of the tens of millions of inhabitants of those megalopolises in an orderly and uninterrupted manner will require the seamless integration of and real time monitoring and response services for public utilities and transportation systems. Part speculative look into the future of the world's urban centers, part technical blueprint, this visionary book helps lay the groundwork for the communication networks and services on which tomorrow's smart cities will run. Written by a uniquely well qualified author team, this book provides detailed insights into the technical requirements for the wireless sensor and actuator networks required to make smart cities a reality.
