

OPERATION

TRANSPORTING WITH A LOADED BUCKET

1. The operator is the ground the bucket is held the farther the material, especially on slopes or when turning the machine. For travel, keep the bucket at its lowest possible position and locked back to afford maximum visibility.

CAUTION! Never transport a load with the bucket fully raised.

2. When loading into a truck, keep positioned so that a minimum of movement is necessary. Loading material and clearing can occur as shown above, can cut down on loading cycle time, like a "pick-and-put" rather than a "dig-and-go" type.

DUMPING BUCKET

1. Raise the lift arm when moving toward the vehicle being loaded. Move slowly if the bucket is raised to dump. While raising the lift arm, control lift of bucket to avoid spilling material into operator's view.

2. Gradually lower bucket at maximum height before dumping. An emptying or full loading, machine stability can be maintained. To make loose material stick in bottom of bucket, lift valve has to be "bumped" back and forth.
3. Raise empty bucket and back away from vehicle, gradually lowering lift arm.

LEVELING/BACK GRADING

1. Spread dirt by driving forward with back of wheel down and raised off the ground.

2. To level, raise lift arm and lift bucket down. Place lift arm control pedal "heel" position to allow bucket to follow ground contour. Drive machine backward, spreading material evenly.

OPERATION

Connecting Attachments

When changing attachments, it is best if the machine and attachment are both on level surfaces. Engine speed should be reduced to connect attachments. Other people must stay clear while machine operator is connecting or removing attachments.

To Connect Attachments:

1. Move engagement lever to the released position.
2. Climb into seat, faster seat belt and start engine. Drive over attachment.
3. Push the foot of the lift control pedal to bring the attachment close to the Puck-A-Tuck.
4. Lower the lift arm completely.
5. Stop engine, set parking brake, climb out of the machine and push engagement lever to the engaged position.

Note: There should be firm resistance on the engagement lever when it is moved to the engaged position. This is necessary to assure the lever will stay engaged.

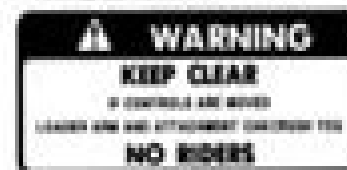

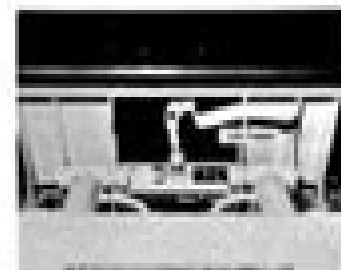

6. Connect auxiliary hydraulic couplers if need be.

To Remove Attachments:

1. Engine must be off, parking brake locked and attachments should be resting on the ground. Move all the power back and forth to release all pressure from the hydraulic system.
2. Disconnect auxiliary hydraulic connections if they are used.
3. Move the Puck-A-Tuck engagement lever to the released position.
4. Drive the machine backwards while lifting the Puck-A-Tuck forward.

USE OF AUXILIARY HYDRAULICS

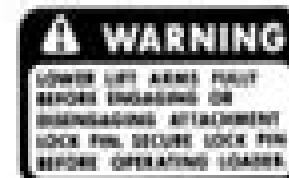

IMPORTANT! Only attachments approved by manufacturer be used. Otherwise, damage to the machine or attachment may occur. Always be sure the area around the coupler is clear before connecting.
