

Beaches Note Taking

Beaches Notetaking Guide

A beach is the place where the ocean meets the land. It is an **actively** changing ecosystem as the waves and tides bring in organisms to join or pass through the ecosystem.

The shorebirds, crabs, and turtles that called **sandy** beaches home are different than the starfish, oysters, and seaweed that call **rocky** beaches home.

Shorebirds are another familiar **beacon** you can find going sideways across sandpipers avoiding them.

Guide

Walking along a beach and the objects and organisms that come ashore, or **beachcombing** is a way to learn more about the ecosystem.

A common discovery you might make on a sandy beach are calcium carbonate **seashells** that invertebrates like mollusks create to protect their soft-tissue.

Portuguese man-o-war jellyfish are another invertebrate **hydr** that uses its **tentacles** to catch its food.
