Early Reading Instruction is a comprehensive analysis of the research evidence from early writing systems to computer models of reading In this book Diane McGuinness provides an innovative solution to the reading war the century old debate over the efficacy of phonics sound based versus whole word meaning based methods She has developed a prototype a set of elements that are critical to the success of a reading method McGuinness shows that all writing systems without exception are based on a sound unit in the language This fact and other findings by paleographers provides a platform for the prototype Other elements of the prototype are based on modern research For example observational studies in the classroom show that time spent on three activities strongly predicts reading success learning phoneme symbol correspondences practice at blending and segmenting phonemes in words and copying writing words phrases and sentences Most so called literacy activities have no effect and some like sight word memorization have a strongly negative effect The National Reading Panel 2000 summarized the research on reading methods after screening out thousands of studies that failed to meet minimum scientific standards In an in depth analysis of this evidence McGuinness shows that the most successful methods children reading a year or more above age norms include all the elements in the prototype Finally she argues because phonics type methods are consistently shown to be superior to whole word methods in studies dating back to the 1960s it makes no sense to continue this line of research The most urgent question for future research is how to get the most effective phonics programs into the classroom      **Preventive Newborn Health** Balaji Govindaswami,2021-04-30 This book is a complete

Reading the Naked Truth Gerald Coles, 2003 With all the talk and print about scientifically based reading research what educational reformers have concealed is that these findings are scandalously flawed Legislation mandating authoritarian and harmful prepackaged reading instruction does nothing but serve corporate interests and political agendas with little regard paid to actually improving reading skills As he connotes in the title of this urgent expose Gerald Coles uncovers what s absent from all the claims with which teachers and the public have been assailed He offers a scathing indictment of the National Reading Panel s research and other attempts to undermine reading education and the educators equipped to do it best Strong on slogans Reading First No Child Left Behind but falling far short on science education legislation disguises itself in a cunning apolitical research as final arbiter stratagem And this has only been fortified by the National Institute of Child Health and Human Development whose own studies as Coles proved in Misreading Reading are rife with deficiencies in design and reasoning Coles analyzes in detail the language of the National Reading Panel Report provides counterarguments to its claims and investigates significant questions it has raised What were those 100 000 studies the NRP allegedly reviewed What were the qualifications of the members of the NRP Did the panel ask the right questions Were the views represented on the panel sufficiently inclusive Did the NRP satisfy the Congressional mandate to ensure that all children learn to read Without Coles thorough critique of this scientific foundation for reading legislation the media will continue to portray the NRP Report as gospel the public particularly teachers policy makers and parents will have inadequate information for making informed instructional decisions and federal state and local advocates of beginning reading instruction with a skills emphasis will have little opposition in achieving their objectives
