

Intermittent Fasting

Stage 1: Right After Eating

- Carbohydrates from food are converted into glucose (sugar) and released into the bloodstream.
- Blood sugar level rises.
- Insulin stimulates the conversion of glucose into glycogen as energy storage.

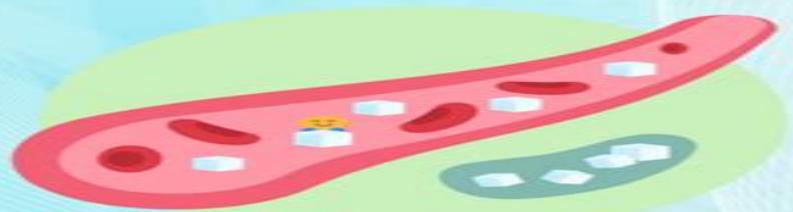

Stage 3: 9 Hours After Eating

- As blood sugar levels continue to drop, the body reacts by converting glycogen back into glucose and releasing it into the bloodstream.
- Fat is not yet used as an energy source, as there is still glucose and glycogen available.

Stage 2: 3 Hours After Eating

- While insulin works, blood sugar level drops.
- In a non-fasting state, glycogen is used as energy.
- Excess glycogen that is not used is stored in the body as fats.

Stage 4: 11 Hours After Eating

- Now that the stored glycogen has been almost used up, a metabolic switch is flipped.
- Fat is burned as it is used as energy.

Stage 5: 14-16 Hours After Eating

- As fat-burning continues, fatty acids are converted into ketones via ketosis.
- Ketones provide energy to the brain, heart and other vital organs.

Lifestyle Medicine, Third Edition James M. Rippe, 2019-04-17

The field of lifestyle medicine which is the study of how daily habits and actions impact on both short and long term health and quality of life continues to expand globally. The scientific and medical literature that supports the success of these lifestyle habits and actions is now overwhelming. Thousands of studies provide evidence that regular physical activity maintenance of a healthy body weight following sound nutritional practices, stress reduction and other good practices all profoundly impact both health and quality of life. Following its predecessors, *Lifestyle Medicine Third Edition* is edited by lifestyle medicine pioneer cardiologist Dr James Rippe. This edition has been thoroughly updated and represents the expert opinions of 20 section editors as well as more than 150 expert chapter authors whose knowledge span all aspects of this emerging discipline. Topics cover lifestyle medicine practices including regular physical activity, proper nutrition and weight management. These principles are applied to the prevention and/or treatment of a wide variety of chronic conditions ranging from heart disease and diabetes to cancer, mental health, addiction and injury prevention. This book serves as evidence base for individuals who wish to practice lifestyle medicine or incorporate some of its principles into either general medicine or subspecialty practice. It provides valuable information to healthcare workers in the fields of nutrition, exercise physiology, psychology, behavioral medicine, health promotion and public policy where lifestyle medicine principles play an ever increasing role.

Curcumin in Health and Disease Beatrice E. Bachmeier, 2019-10-11

The plant derived polyphenol curcumin has been used in promoting health and combating disease for thousands of years. Its therapeutic effects have been successfully utilized in Ayurvedic and Traditional Chinese Medicine in order to treat inflammatory diseases. Current results from modern biomolecular research reveal the modulatory effects of curcumin on a variety of signal transduction pathways associated with inflammation and cancer. In this context, curcumin's antioxidant, anti-inflammatory, anti-tumorigenic and even anti-metastatic activities are discussed. On the cellular level, the reduced activity of several transcription factors such as NFκB or AP-1 and the suppression of inflammatory cytokines, matrix degrading enzymes, metastasis related genes and even microRNAs are reported. On functional levels, these molecular effects translate into reduced proliferative, invasive and

metastatic capacity as well as induced tumor cell apoptosis All these effects have been observed not only in vitro but also in animal models In combination with anti neoplastic drugs like Taxol kinase inhibitors and radiation therapy curcumin potentiates the drugs therapeutic power and can protect against undesired side effects Natural plant derived compounds like curcumin have one significant advantage They do not usually cause side effects This feature qualifies curcumin for primary prevention in healthy persons with a predisposition to cancer arteriosclerosis or chronic inflammatory diseases Nonetheless curcumin is considered safe although potential toxic effects stemming from high dosages long term intake and pharmacological interactions with other compounds have yet to be assessed This Special Issue examines in detail and updates current research on the molecular targets protective effects and modes of action of natural plant derived compounds and their roles in the prevention and treatment of human diseases **Nutrition Abstracts and Reviews** ,2006
