Music Emotion Recognition Multimedia Computing Communication And Intelligence:

Music Emotion Recognition Yi-Hsuan Yang, Homer H. Chen, 2011-02-22 Providing a comprehensive review of existing work in music emotion developed in psychology and engineering this book explains how to account for the subjective nature of emotion perception in the development of automatic music emotion recognition MER systems Among the first publications dedicated to automatic MER it begins with a complete introduction to the essential aspects of MER including background key techniques and applications This ground breaking reference examines emotion from a dimensional perspective It defines emotions in music as points in a 2D plane in terms of two of the most fundamental emotion dimensions according to psychologists valence and arousal

Deep Learning in Personalized Music Emotion Recognition Yannik Venohr, 2025-04-28 Music has a unique power to evoke strong emotions in us bringing us to tears lifting us into ecstasy or triggering vivid memories Often described as a universal language it conveys feelings that transcend words But are machines too able to understand this language and capture emotions conveyed in music This book delves into the field of Musical Emotion Recognition MER aiming to develop a mathematical model to predict the emotional content of music It explores the fundamentals of this interdisciplinary research area including the relationship between music and emotions mathematical representations of music and deep learning algorithms Two MER models are developed and evaluated one employing handcrafted audio features with a long short term memory architecture and the other using embeddings from the pre trained music understanding model MERT Results show that MERT embeddings can enhance predictions compared to traditional handcrafted features Additionally driven by the subjectivity of musical emotions and the low inter rater agreement of annotations this book investigates personalized emotion recognition The findings suggest that personalized models surpass the limitations of general MER systems and can even outperform a theoretically perfect general MER system From

Feng Wu, 2014-07-25 Visual information is one of the richest and most bandwidth consuming modes of communication To meet the requirements of emerging applications powerful data compression and transmission techniques are required to achieve highly efficient communication even in the presence of growing communication channels that offer increased

bandwidth Presenting the results of the author's years of research on visual data compression and transmission *Advances in Visual Data Compression and Communication Meeting the Requirements of New Applications* provides a theoretical and technical basis for advanced research on visual data compression and communication The book studies the drifting problem in scalable video coding analyzes the reasons causing the problem and proposes various solutions to the problem It explores the author's Barbell based lifting coding scheme that has been adopted as common software by MPEG It also proposes a unified framework for deriving a directional transform from the nondirectional counterpart The structure of the framework and the statistic distribution of coefficients are similar to those of the nondirectional transforms which facilitates subsequent entropy coding Exploring the visual correlation that exists in media the text extends the current coding framework from different aspects including advanced image synthesis from description and reconstruction to organizing correlated images as a pseudo sequence It explains how to apply compressive sensing to solve the data compression problem during transmission and covers novel research on compressive sensor data gathering random projection codes and compressive modulation For analog and digital transmission technologies the book develops the pseudo analog transmission for media and explores cutting edge research on distributed pseudo analog transmission denoising in pseudo analog transmission and supporting MIMO It concludes by considering emerging developments of information theory for future applications Multimedia Computing and Systems International Conference on Multimedia Computing and Systems, 1999 This two volume set contains the proceedings of the June 1999 conference devoted to presenting and exploring scientific and technological advancements innovations opportunities and solutions in Multimedia applications Among other topics the 318 contributions cover quality of service network management and distributed multimedia systems video compression web and video servers virtual and augmented reality computer graphics and animation multimodal interaction and usability content based retrieval from image and video databases authoring tools software engineering technologies for multimedia electronic commerce and educational cultural heritage and medical applications Contains an author index but no subject index Annotation c Book News Inc Portland OR booknews com *Linguistics and Language Behavior Abstracts*, 2008-02 **Personalized**
