Numerical Conformal Mapping Nicolas Papamichael, Nikos Stylianopoulos, 2010 This is a unique monograph on numerical conformal mapping that gives a comprehensive account of the theoretical computational and application aspects of the problems of determining conformal modules of quadrilaterals and of mapping conformally onto a rectangle It contains a detailed study of the theory and application of a domain decomposition method for computing the modules and associated conformal mappings of elongated quadrilaterals of the type that occur in engineering applications The reader will find a highly useful and up to date survey of available numerical methods and associated computer software for conformal mapping The book also highlights the crucial role that function theory plays in the development of numerical conformal mapping methods and illustrates the theoretical insight that can be gained from the results of numerical experiments This is a valuable resource for mathematicians who are interested in numerical conformal mapping and wish to study some of the recent developments in the subject and for engineers and scientists who use or would like to use conformal transformations and wish to find out more about the capabilities of modern numerical conformal mapping

Numerical Conformal Mapping Mien-Hsan Niu, 1987 Numerical Conformal Mapping Using Cross-ratios and Delaunay Triangulation Tobin A. Driscoll, 1996 Abstract We propose a new algorithm for computing the Riemann mapping of the unit disk to a polygon also known as the Schwarz Christoffel transformation The new algorithm CRDT is based on cross ratios of the prevertices and also on cross ratios of quadrilaterals in a Delaunay triangulation of the polygon The CRDT algorithm produces an accurate representation of the Riemann mapping even in the presence of arbitrary long thin regions in the polygon unlike any previous conformal mapping algorithm We believe that CRDT can never fail to converge to the correct Riemann mapping but the correctness and convergence proof depend on conjectures that we have so far not been able to prove We demonstrate convergence with computational experiments The Riemann mapping has applications to problems in two dimensional potential theory and to finite difference mesh generation We use CRDT to produce a mapping and solve a boundary value problem on long thin regions for which no other algorithm can solve these problems

A Comparison of Some Numerical Conformal Mapping Methods for Simply and Multiply Connected Domains Mohamed Badreddine, 2016 This dissertation compares several methods for computing conformal maps from simply and multiply connected domains bounded by circles to target domains bounded by smooth curves and curves with corners We discuss the use of explicit preliminary maps including the osculation method of Grassmann to conformally map the target domain to a more nearly circular domain The Fourier series method due to Fornberg and its generalizations to multiply connected domains are then applied to compute the maps to the nearly circular domains The nal map is represented as a composition of the Fourier Laurent series with the inverted explicit preliminary maps A novel method for systematically removing corners with power maps is also implemented and composed with the Fornberg maps which require smooth boundaries and the level of error that can be expected when using Fourier series to treat domains with corners is illustrated Some comparison to

Wegmann's alternating projection method which does not require smooth boundaries is included. We also combine the Fornberg-like method with Karman Treitz method for removing trailing edge corners in multi-element airfoils. The use of explicit maps has been suggested often in the past but has rarely been carefully studied especially for the multiply connected case. A key contribution of this dissertation is the development of Matlab code for testing existing and new combinations of these various methods in order to provide a tool for future applications such as solving potential theory problems in general multiply connected domains in the plane.

Embracing the Song of Expression: An Mental Symphony within **Numerical Conformal Mapping Numerical Conformal Mapping**

In a world taken by screens and the ceaseless chatter of fast connection, the melodic elegance and emotional symphony produced by the written term frequently fade in to the background, eclipsed by the persistent noise and disruptions that permeate our lives. However, set within the pages of **Numerical Conformal Mapping Numerical Conformal Mapping** an enchanting literary prize overflowing with natural thoughts, lies an immersive symphony waiting to be embraced. Constructed by a masterful musician of language, this interesting masterpiece conducts readers on a psychological trip, well unraveling the concealed tunes and profound influence resonating within each cautiously constructed phrase. Within the depths of the touching examination, we shall examine the book is main harmonies, analyze its enthralling writing model, and surrender ourselves to the profound resonance that echoes in the depths of readers souls.
