Advances in Engineering and Information Science Toward Smart City and Beyond Ryoichi Shinkuma, Fatos Khafa, Takayuki Nishio, 2023-05-24 This book presents advances on the state of the art in smart cities systems and applications based on the proof of concept and prototyping for smart cities in an interdisciplinary context of engineering and information sciences Smart cities have emerged as highly complex technological endeavors that combine knowledge and technology from many disciplines ranging from information sciences to engineering Due to their complex nature the modeling development and prototyping of applications in smart cities present a myriad of challenges including technical economic and social ones across application subdomains such as smart transportation social welfare tourism and smart industry It becomes difficult or sometimes impossible to provide a solution for such potential research issues and challenges from a traditional disciplinary approach only to tackle such research issues and to make the paradigm of smart cities a reality interdisciplinary approaches are deemed necessary Readers developers practitioners and policy makers in the field find in the book insights experiences findings and perspectives on smart cities applications with an emphasis on real life prototyping beyond the confines of laboratory experiments

Development of Electric Vehicles in Smart Grid Concepts Supriya Jaiswal, Ajay Kumar, Sanjeevikumar Padmanaban, 2025-08-01 Development of Electric Vehicles in Smart Grid Concepts presents a guide to the design development and deployment of electric vehicles in smart grids The book examines the current technological progression of power electronic converters for smart grid operation and EV technology as well as providing the international standards policies and market needs to ensure readers understand the nuanced requirements of the grid The book begins by introducing EVs encompassing their historical evolution current status and potential advancements It delves into the architecture components working modes and technological challenges within EVs There is a dedicated chapter on international standards governmental policies and codes for implementation followed by the integration of EVs into smart grids discussing infrastructure requirements impacts and integration modes V2G G2V V2B and V2H Technical aspects modeling and optimization methods for EV scheduling are explored alongside battery modeling degradation charging standards SOC estimation and battery management systems Additionally the book examines EV interaction with smart grids renewable energy sources energy storage systems global market surveys and future trends Provides set by step design development and deployment procedures for electric vehicles in the context of smart grid technology Describes international standards and policies in the context of EV s and their integration in smart grids Examines the entire concept of EVs including energy storage systems battery modeling degradation grid integration policies and market perspectives

Advances in Green Energy Systems and Smart Grid Kang Li, Jianhua Zhang, Minyou Chen, Zhile Yang, Qun Niu, 2018-09-04 The three volume set CCIS 923 CCIS 924 and CCIS 925 constitutes the thoroughly refereed proceedings of the First International Conference on Intelligent Manufacturing and Internet of Things and of the 5th International

Conference on Intelligent Computing for Sustainable Energy and Environment ICSEE 2018 held in Chongqing China in September 2018 The 135 revised full papers presented were carefully reviewed and selected from over 385 submissions The papers of this volume are organized in topical sections on clean energy electric vehicles energy saving energy storages power system analysis

Developing Charging Infrastructure and Technologies for Electric Vehicles Alam, Mohammad Saad, Pillai, Reji Kumar, Murugesan, N., 2021-12-31 The increase in air pollution and vehicular emissions has led to the development of the renewable energy based generation and electrification of transportation Further the electrification shift faces an enormous challenge due to limited driving range long charging time and high initial cost of deployment Firstly there has been a discussion on renewable energy such as how wind power and solar power can be generated by wind turbines and photovoltaics respectively while these are intermittent in nature The combination of these renewable energy resources with available power generation system will make electric vehicle EV charging sustainable and viable after the payback period Recently there has also been a significant discussion focused on various EV charging types and the level of power for charging to minimize the charging time By focusing on both sustainable and renewable energy as well as charging infrastructures and technologies the future for EV can be explored *Developing Charging Infrastructure and Technologies for Electric Vehicles* reviews and discusses the state of the art in electric vehicle charging technologies their applications economic environmental and social impact and integration with renewable energy This book captures the state of the art in electric vehicle charging infrastructure deployment their applications architectures and relevant technologies In addition this book identifies potential research directions and technologies that facilitate insights on EV charging in various charging places such as smart home charging parking EV charging and charging stations This book will be essential for power system architects mechanics electrical

engineers practitioners developers practitioners researchers academicians and students interested in the problems and solutions to the state of the art status of electric vehicles

Controller Design for Industrial Applications Arindam Mondal, Souvik Ganguli, 2025-05-28 Controller Design for Industrial Applications is essential for anyone looking to master the advanced techniques of intelligent controller design enabling you to effectively tackle the complexities of modern industrial processes and optimize performance in an ever evolving landscape Industrial processes are often complex and dynamic making it challenging to design controllers that can maintain stable and optimal operation Traditional controllers such as PID controllers have been widely used in industrial applications but have limitations in handling non linear and uncertain systems Intelligent controllers offer an alternative solution that can adapt to changing system dynamics and disturbances The use of intelligent controllers in industrial applications has gained increasing attention in recent years with numerous successful implementations in various fields such as process control robotics control HVAC control power systems control and autonomous vehicle control However the design and implementation of intelligent controllers require careful consideration of hardware and software requirements as well as simulation and testing procedures to ensure reliable and safe operation In the rapidly evolving industrial landscape it is essential to develop advanced control techniques to enhance productivity minimize costs and ensure safety Traditional control methods often struggle to handle complex systems and unpredictable environments However with the emergence of intelligent control techniques there is a great opportunity to improve industrial automation and control systems Controller Design for Industrial Applications aims to provide a comprehensive understanding of intelligent controller design for industrial applications from theoretical concepts to practical implementation It will cover the fundamental concepts of intelligent control theory and techniques their application in various industrial fields and practical implementation and design considerations

Sustainable Energy for Smart Cities Joao L. Afonso, Vitor Monteiro, José Gabriel Pinto, 2022-02-28 This book constitutes the refereed post conference proceedings of the 3rd EAI International Conference on Sustainable Energy for Smart Cities SESC 2021 held in November 2021 The conference was framed within the 7th Annual Smart City 360 Summit Due to COVID 19 pandemic the conferences were held virtually The 13 revised full papers were carefully reviewed and selected from 28 submissions They present multidisciplinary scientific results toward answering the complex technological problems of emergent Smart Cities The subjects related to sustainable energy framed with the scope of smart cities and addressed along with the SESC 2021 conference are crucial to guarantee an equilibrium among economic growth and environmental sustainability as well as to contribute to reducing the impact of climate change
