materials and devices Improvements in passive components have kept pace with advances in active devices Unanticipated benefits in design flexibility and tolerances to adverse environments have been discovered Mass production of passive components can bring about wider use of ceramics in microelectronic systems Both industrial processes and consumer products can thereby be improved In the final chapter the authors have examined the interface between materials and devices as it affects microcircuitry and have shown how technology is transferable from the aerospace community to many broad tasks in fulfilling human needs Foreword *Uses of Ceramics in Microelectronics: A Survey* W.
