It starts by showing you how to build, deploy and secure the API app. Next it introduces you to Logic Apps and helps you quickly start building your integration applications. We'll then go through the different connectors available for Logic Apps to build your automated business process workflow. Further on you will see how to create a complex workflow in Logic Apps using Azure Functions. You will then add a SaaS application to your existing cloud applications and create Queues and Topics in Service Bus on Azure using Azure Portal. Towards the end we'll explore event hubs and IoT hubs and you'll get to know more about how to tool and monitor the business workflow in Logic Apps. Using this book you will be able to support your apps that connect to data anywhere be it in the cloud or on-premises. Style and approach This practical, hands-on tutorial shows you the full capability of App Service and other Azure-based integration services to build scalable and highly available web and mobile apps. It helps you successfully build and support your applications in the cloud or on-premises successfully. We'll debunk the popular myth that switching to cloud is risky; it's not.

Enterprise Systems Integration Diogo R. Ferreira, 2013. The field of enterprise systems integration is constantly evolving as every new technology that is introduced appears to make all previous ones obsolete. Despite this continuous evolution there is a set of underlying concepts and technologies that have been gaining an increasing importance in this field. Examples are asynchronous messaging through message queues, data and application adapters based on XML and Web services, the principles associated with the service-oriented architecture, SOA, service composition, orchestrations and advanced mechanisms such as correlations and long-running transactions. Today these concepts have reached a significant level of maturity and they represent the foundation over which most integration platforms have been built. This book addresses integration with a view towards supporting business processes. From messaging systems to data and application adapters and then to services orchestrations and choreographies the focus is placed on the connection between systems and business processes and particularly on how it is possible to develop an integrated application infrastructure in order to implement the desired business processes. For this purpose the text follows a layered bottom up approach with application-oriented integration at the lowest level followed by service-oriented integration and finally completed by process-oriented integration at the topmost level. The presentation of concepts is accompanied by a set of instructive examples using state-of-the-art technologies such as Java Message Service, JMS, Microsoft Message Queuing, MSMQ, Web Services, Microsoft BizTalk Server and the Business Process Execution Language, BPEL. The book is intended as a textbook for advanced undergraduate or beginning graduate students in computer science especially for those in an information systems curriculum. IT professionals with a background in programming, databases and XML will also benefit from the step-by-step description of the various integration levels and the related implementation examples.
