Chemistry of Human Nature Tom Husband, 2020-08-28 Why does chocolate taste so good Why do we seek the one How do traits such as intelligence creativity and violence arise and what purpose do they serve This book links these characteristics to the origins of life showing that the conditions necessary to bring life into existence echo through our modern day behaviour The chemistry of the body is not only fascinating but also highly relevant to everyone since we are all concerned with maximising our health and enjoyment of life Currently there are not many popular science books concerned with biochemistry One reason for this might be the particularly complex nature of the science involved This book starts with the fundamentals and then works towards a deeper understanding of the chemistry of human nature Essential reading for anyone with an interest in this science and written at a level accessible to experts and non experts alike

Data-Based Radiation Oncology - Design of Clinical Trials

Kerstin A. Kessel, Anne W. Lee, Søren M. Bentzen, Bhadransain Vikram, Fridtjof Nuesslin, Stephanie E. Combs, 2018-04-12 In radiation oncology as in many other specialties, clinical trials are essential to investigate new therapy approaches. Usually, preparation for a prospective clinical trial is extremely time consuming until ethics approval is obtained. To test a new treatment, usually many years pass before it can be implemented in the routine care. During that time, already new interventions emerge, new drugs appear on the market, technical/physical innovations are being implemented, novel biology-driven concepts are translated into clinical approaches while we are still investigating the ones from years ago. Another problem is associated with molecular diagnostics and the growing amount of tumor-specific biomarkers which allows for a better stratification of patient subgroups. On the other side, this may result in a much longer time for patient recruiting and consequently in larger multicenter trials. Moreover, all of the relevant data must be readily available for treatment decision making, treatment as well as follow up and ultimately for trial evaluation. This challenges even more for agreed standards in data acquisition quality and management. How could we change the way currently clinical trials are performed in a way they are safe and ethically justifiable and speed up the initiation process so we can provide new and better treatments faster for our patients? Further while we rely on various quantitative information, handling distributed large heterogeneous amounts of data efficiently is very important. Thus, data

management becomes a strong focus A good infrastructure helps to plan tailor and conduct clinical trials in a way they are easy and quickly analyzable In this research topic we want to discuss new ideas for intelligent trial designs and concepts for data management
