*Software Engineering, Artificial Intelligence, Networking and Parallel/Distributed Computing* Roger Lee, 2022-11-18 This book presents scientific results of the 23rd ACIS International Summer Virtual Conference on Software Engineering Artificial Intelligence Networking and Parallel Distributed Computing SNPD2022 Summer which was held on July 4-6, 2022 at Kyoto City, Japan. The aim of this conference was to bring together researchers and scientists, businessmen and entrepreneurs, teachers, engineers, computer users, and students to discuss the numerous fields of computer science and to share their experiences and exchange new ideas and information in a meaningful way. Research results about all aspects, theory, applications, and tools of computer and information science, and to discuss the practical challenges encountered along the way and the solutions adopted to solve them. The conference organizers selected the best papers from those papers accepted for presentation at the workshop. The papers were chosen based on review scores submitted by members of the program committee and underwent further rigorous rounds of review. From this second round of review, 15 of the most promising papers are then published in this Springer SCI book and not the conference proceedings. We impatiently await the important contributions that we know these authors will bring to the field of computer and information science.

*Making Games for Impact* Kurt Squire, 2021-10-26 Designing games for learning: case studies show how to incorporate impact goals, build a team, and work with experts to create an effective game. Digital games for learning are now commonplace, used in settings that range from K-12 education to advanced medical training. In this book, Kurt Squire examines the ways that games make an impact on learning, investigating how designers and developers incorporate authentic social impact goals, build a team, and work with experts in order to make games that are effective and marketable. Because there is no one design process for making games for impact, specific processes arise in response to local needs and conditions. Squire presents a series of case studies that range from a small playable game created by a few programmers and an artist to a multimillion-dollar project with funders, outside experts, and external constraints. These cases, drawn from the Games Learning Society Center at the University of Wisconsin-Madison, show designers tackling such key issues as choosing platforms, using data analytics to guide development, and designing for new markets. Although not a how-to guide, the book offers developers, researchers, and students real-world lessons in greenlighting a project, scaling up design teams, game-based assessment, and more. The final chapter examines the commercial development of an impact game in detail, describing the creation of an astronomy game, *At Play in the Cosmos*, that ships with an introductory college textbook.
