According to the World Health Organization cardiovascular diseases are the leading cause of death globally taking an estimated 17.9 million lives each year most of which are attributable to atherosclerosis Notably the mechanisms that regulate atherosclerotic disease development and expression are not fully understood yet MicroRNAs are small non coding molecules of ribonucleic acid that regulate the gene expression at the post transcriptional level and play a key role in the pathophysiology of different cardiovascular diseases including atherosclerosis Moreover circulating microRNAs have been studied as biomarkers of different diseases and specific circulating microRNA profiles are associated with the presence of atherosclerosis of different arterial territories and multi territorial atherosclerosis These issues are discussed in the book including the core results of the translational research carried out by our group Knowledge of microRNA profiles in such context provided insights into the pathophysiology of atherosclerosis and supports the potential clinical value of microRNAs as noninvasive biomarkers      **Recent Trends in Cancer Biology: Spotlight on Signaling Cascades and microRNAs**

Sundas Fayyaz,Amjad Ahmad Farooqi,2018-03-07 Cancer is a multifaceted disease and overwhelmingly increasing experimental evidence has helped us to develop a deeper understanding of the role of signal transduction cascades in cancer development and progression Tissue microarrays and next generation sequencing technologies have assisted us to gather missing pieces of jigsaw puzzle and we now know that deregulation of spatiotemporally controlled signaling cascades play fundamental role in metastasis and resistance against wide ranging therapeutics This book offers a balanced overview of the rapidly emerging cutting edge research in molecular oncology and good source of knowledge for established oncologists basic and medical students and pharmaceutical industry associated R D departments      **Computational Epigenetics in**
