code on the screen All recommendations are supported by detailed rationales Finally the book explores two uses of VHDL synthesis and testbenches It examines the key characteristics of code intended for synthesis distinguishing it from code meant for simulation and then demonstrates the design and implementation of testbenches with a series of examples that verify different kinds of models including combinational sequential and FSM code Examples from the book are also available on a companion website enabling the reader to experiment with the complete source code   Service-Dominant Business Design Egon Lüftenegger, This dissertation presents tool supported process for designing Work by Following a Service Dominant Logic The tools supported by the design process are the following The Service Dominant Strategy Canvas The Service Dominant Business Model Radar the Business Service Composition Blueprint and the Business Services Catalogue
