**Conrad C. Crane**

## **Mig 130 Manual:**

*Field Manuals* United States. War Department, 1979      The Chevrolet Corvette Daniel Holt, 2005-04-11 This collection chronicles the development of America's favorite sports car by the designers and engineers who made it happen. These 30 papers cover more than 50 years and six generations of the engineering styling and research and development of the Chevrolet Corvette. Twenty-two papers focus on the first five generations with the last eight papers detailing the new sixth generation Corvette. Material collected in this volume truly has unprecedented historical value. A 1954 paper by Maurice Olley presents a technical description of the first production Corvette. The book's preface includes insight from Zora Arkus Duntov into the reasons behind the Corvette's development. Other highlights include comments from Corvette's chief engineer, a press release created by General Motors on its fiftieth anniversary and a timeline with photos documenting the Corvette's evolution. Contents: Includes Preface, Production Improves the Breed by Dennis Simanaitis, Zora's Contribution to the Corvette by Dave McLellan, Sports Car Development by Zora Arkus Duntov, McLellan's Corvette Era by Dave McLellan, Comments from Corvette's Chief Engineer by David C. Hill, Corvette People, GM Press Release, Corvette Timeline by GM for the 50th Anniversary of the Corvette.      **Armor crewman** United States. Metal Construction and British Welding Journal, 1973 Includes two special issues per year containing the proceedings of a major conference.      **American Airpower Strategy in Korea, 1950-1953** Conrad C. Crane, 2000 The Korean War was the first armed engagement for the newly formed U.S. Air Force but far from the type of conflict it expected or wanted to fight. As the first air war of the nuclear age it posed a major challenge to the service to define and successfully carry out its mission by stretching the constraints of limited war while avoiding the excesses of total war. Conrad Crane analyzes both the successes and failures of the air force in Korea offering a balanced treatment of how the air war in Korea actually unfolded. He examines the Air Force's contention that it could play a decisive role in a non-nuclear regional war but shows that the fledgling service was held to unrealistically high expectations based on airpower's performance in World War II despite being constrained by the limited nature of the Korean conflict. Crane exposes the tensions and rivalries between services showing that emphasis on strategic bombing came at the expense of air support for ground troops and he tells how interactions

between army and air force generals shaped the air force's mission and strategy. He also addresses misunderstandings about plans to use nuclear, biological, and chemical weapons in the war and includes new information from pilot correspondence about the informal policy of hot pursuit over the Yalu that existed at the end of the war. The book considers not only the actual air effort in Korea but also its ramifications. The air force doubled in size during the war and used that growth to secure its position in the defense establishment but it wagered its future on its ability to deliver nuclear weapons in a high intensity conflict, a position that left it unprepared to fight the next limited war in Vietnam. As America observes the fiftieth anniversary of its initial engagement in Korea, Crane's book is an important reminder of the lessons learned there. And as airpower continues to be a cornerstone of American defense, this examination of its uses in Korea provides new insights about the air force's capabilities and limitations.
