**Exploring Blockchain Applications** Sezer Bozkus Kahyaoglu, Vahap Tecim, 2024-05-07 In this book the development process of blockchain algorithms and examples of their applications in different sectors are explored. The opportunities and challenges of blockchain implementations that arise in making technological innovations usable in corporate structures are discussed. In this respect the book aims to deal with both the conceptual framework and the real

challenges and opportunities encountered in practice regarding the blockchain applications. It is tried to contribute to the literature by presenting practical blockchain application suggestions to the readers on a scientific basis. It is a fact that blockchain technology is considered one of the most disruptive and revolutionary innovations after the invention of the internet. Blockchain technology, which was first used for cross border payments, is coming up with a new application area in a different sector every day. The main purpose of Blockchain based systems is to spread the trust service provided by a central intermediary to machines in transactions between two parties. Thus it removes the need for this trust from the monopoly of a single intermediary. Blockchain implementation scenarios are to establish math based trust in an untrusted environment. While exploring the complexity of blockchain applications in different sectors the emerging risks are also examined from a management perspective. In particular it is aimed to be a key work that the management levels of the enterprises can benefit from in the decision making processes. It will be seen that blockchain technologies will be used unlimitedly in design planning, management and decision making. This book will also introduce new visions for practitioners to use different blockchain technologies and methodologies to face problems.
