A Metaverse for the Good: Design, Application and Understanding Maria V. Sanchez-Vives, Mel Slater, Omar Niamut, Xueni Pan, Lucio Lamberti, Anna Kobusinska, Piotr Skrzypczynski, Doron Friedman, Aurelio López-Tarruella Martínez, Matthias Quent, 2026-01-16

The metaverse is a large scale social environment based on the convergence of virtual and physical reality. Participants can take part in the metaverse through virtual augmented or mixed reality. They can carry out everyday activities together ranging from entertainment through to education, business, politics, health or even legal proceedings. This may have a profound impact on the way we live, providing new beneficial ways of carrying out a multitude of activities but may also introduce a multitude of problems that we cannot envisage. Mobile devices in conjunction with the world wide web and social media have led to revolutionary changes in society including on the positive side deep connectivity between people but on the other a potential threat to democracy. The immersive nature of the metaverse will potentially enhance both the positive and negative impact by an order of magnitude. The metaverse is an idea rather than a reality. There exist systems that offer nascent examples of a metaverse such as VRChat, Horizon Worlds, Decentraland and others but these are virtual environments that can be visited simultaneously by a multitude of participants who can see avatars of one another and interact together in limited ways. Such systems have been around since the 1990s usually called collaborative virtual environments (CVEs). The modern versions introduce conceptually nothing new except for their scale in implementation. Even the avatars often used today are hardly more elaborate than those that were used in the 1990s and early 2000s although today we have the possibility of using personalized avatars of increasing quality. Therefore the central problem to be addressed in this Research Topic is to foresee how a metaverse might actually go beyond the well known idea and implementations of CVEs. How will experiences in the metaverse be different from experiences in CVEs? What technology underpins the creation of such a metaverse? What applications are likely to emerge across a range of activities that are likely to be positive for humanity? What are the ethical, legal and political implications both positive and dangers? Primarily what evidence can be offered to support the views or findings of the authors? This Research Topic is in conjunction with the conference A Metaverse for the Good although submissions that were not initially presented at this conference are also welcome. Papers may be of any of the types afforded by Frontiers although those that include empirical evidence for the arguments that they present will be prioritized. The themes of the Research Topic include the following ideally including specific evidentiary examples: Metaverse as an agent for a more inclusive, responsible and sustainable business and economic environment; The economic impact of the metaverse on companies, industries and economies; The future of work for example whether working from home in immersive real time collaboration with others around the world including with people physically present at the workplace will be feasible; Are there examples of this today? New models for metaverse based education; massive online physical and virtual classrooms that anyone can join from anywhere; The use of AI in the

foundations implementation and applications in a metaverse The impact of immersive experiences on the individuals in terms of learning engagement self efficacy Technical challenges including computer graphics distributed and networked systems block chain human computer interaction Neurotechnology for example whether people will be able to interact in the metaverse through brain computer interfaces and the impact for people with physical disabilities Ethical regulatory and legal aspects ranging from ethical problems including the use of AI how the metaverse might be regulated The metaverse for medical and psychiatric treatment

Playthings and Playtimes Hannah Field, Seth Giddings, Ben Highmore, 2025-10-29 In 2024 at the Barbican Art Gallery in London the Mexico based Belgian artist Francis Al s exhibited films of children from across the world playing with sticks hoops marbles and other toys The implication was clear play feels and looks like a universal language but takes on specific local forms Using this as a starting point *Playthings and Playtimes* explores the conflict and contradictions that circulate when play is simultaneously recognized as a species attribute part of human nature and as something crucially differentiated across time and space by design technology sentiment pedagogic values and so on The chapters in this volume demonstrate this interplay between the fixed and the mutable Topics range from the elaborate miniature worlds made by H G Wells and his sons to digitized fidget spinners from avant garde Uruguayan artist Joaqu n Torres Garc a s wooden blocks to the playground spaces of Kuwait and from the much maligned plastic toy to the new museum Young V A Together they bring play and the world of feelings into sustained contact with the history of material culture and design psychoanalysis childhood studies and other disciplines concerned with play culture In the process *Playthings and Playtimes* investigates key elements of a humanities approach to the modern world through the prism of play s affective materiality

Don't Use Your Words! Jane Juffer, 2019-05-28 How children are taught to control their feelings and how they resist this emotional management through cultural production Today even young kids talk to each other across social media by referencing memes songs and movements constructing a common vernacular that resists parental educational and media imperatives to name their feelings and thus control their bodies Over the past two decades children s television programming has provided a therapeutic site for the processing of emotions such as anger but in doing so has enforced normative structures of feeling that Jane Juffer argues weaken the intensity and range of children s affective experiences *Don t Use Your Words* seeks to challenge those norms highlighting the ways that kids express their feelings through cultural productions including drawings fan art memes YouTube videos dance moves and conversations while gaming online Focusing on kids between ages five and nine *Don t Use Your Words* situates these productions in specific contexts including immigration policy referenced in drawings by Central American children just released from detention centers and electoral politics as contested in kids artwork expressing their anger at Trump s victory Taking issue with the mainstream tendency to speak on behalf of children Juffer argues that kids have the agency to answer for themselves what does it feel like to be a kid
