Ferson,Campbell R. Harvey,1993 This paper studies average and conditional expected returns in national equity markets and their relation to a number of fundamental country attributes The attributes are organized into three groups The first is relative valuation ratios such as price to book value cash flow earnings and dividends The second group measures relative economic performance and the third measures industry structure We find that average returns across countries are related to the volatility of their price to book ratios Predictable variation in returns is also related to relative gross domestic product interest rate levels and dividend price ratios We explore the hypothesis that cross sectional variation in the country attributes proxy for variation in the sensitivity of national markets to global measures of economic risks We test single factor and two factor models in which countries conditional betas are assumed to be functions of the more important fundamental attributes *The New York Times Index* ,1967 Gas Logic ,1915 **Show** ,1963-10
