University, 1989 Partial Least Squares for Discrimination Matthew Barker, 2010-10-01 Partial least squares PLS was not originally designed as a tool for statistical discrimination In spite of this applied scientists routinely use PLS for classification and there is substantial empirical evidence to suggest that it performs well in that role The interesting question is why Why can a procedure that is principally designed for over determined regression problems locate and emphasize group structure Using PLS in this manner has heuristic support owing to the relationship between PLS and canonical correlations analysis CCA and the relationship in turn between CCA and linear discriminant analysis LDA This dissertation replaces the heuristics with a formal statistical explanation As a consequence it will become clear that PLS is to be preferred over principal components analysis PCA when discrimination is the goal and dimension reduction is needed
