Particle Deposition in Membranes Feed Channels Iannacone Stefano, 2015-12-14 Want to innovate effectively The role of technology in our lives has never been more important That means we need to be better and faster at taking our bright ideas from the laboratory and turning them into commercial assets We do it but we could do it better It is my job to find ways to use technology in a more affordable way I often see activities where we re doing great technical and scientific work but we haven t given enough thought to how we are going to implement it commercially I think we can do a lot more and more quickly Our planet s future depends on us May this work be a small step forward

Biofouling of Membrane Systems Szilárd Bucs, Joop Kruithof, Mark C. M. van Loosdrecht, Johannes Simon Vrouwenvelder, 2018-09-15 Because of the uneven distribution of fresh water in time and space and the increasing human population a large number of regions are experiencing water scarcity and stress Membrane based desalination technologies like reverse osmosis have the potential to solve the fresh water crisis in coastal areas However in many cases membrane performance is restricted by biofouling Biofouling of Membrane Systems gives a comprehensive overview on the state of the art strategies to control biofouling in spiral wound reverse osmosis membrane systems and point to possible future research directions Despite the fact that much research and development has been done to overcome biofouling in spiral wound membrane systems used for water treatment biofouling is still a major practical problem causing performance decline and increased energy demand Biofouling of Membrane Systems is divided into three sections including modelling and numerical analysis non destructive characterization and feed spacer geometry optimization It focuses on the development of biomass in the feed channel of the membrane module and its effect on pressure drop and hydrodynamics This book can be used to develop an integral strategy to control biofouling in spiral wound membrane systems An overview of several potential complementary approaches to solve biofouling is given and an integrated approach for biofouling control and feed spacer design is proposed
