Influenza Virus Vaccines and Immunotherapies Arun Kumar, Shakti Singh, 2016-03-15 Influenza virus infections lead to thousands of deaths worldwide annually and billions of dollars economic burden. Despite continuing advances in our understanding of the immune evasion mechanism, the disease remains one of the foremost threats for human beings. Traditional vaccines attenuated and inactivated mainly provide protection by inducing virus neutralizing antibodies targeting ever-changing surface antigens. Haemagglutinin HA and Neuraminidase NA. Due to genetic shift and immune selection pressure, prevalence of circulating influenza virus subtypes changes every year. Therefore, mismatch between circulating strain and vaccine strain can critically affect the success rate of these conventional flu vaccines and requires continuous monitoring of circulating influenza virus subtypes and change in the vaccine formulations accordingly. The collective limitations of existing flu vaccines urgently call for the development of a novel universal vaccine that might provide the required protective immunity to a range of influenza virus subtypes. New approaches are being investigated mainly targeting conserved regions of flu proteins. Some of these approaches include universally conserved epitopes of HA nucleoprotein NP, capsid protein M1, and ion channel protein M2 that induced strong immune responses in animal models. Some attention and progress appears to be focused on vaccines based on the M2 ectodomain M2e employing a variety of constructs, adjuvants, and delivery systems including M2e hepatitis B core antigen, flagellin constructs, and virus-like particles (VLP). Animal studies with these M2e candidate vaccines demonstrated that these vaccine candidates can prevent severe illness and death but not infection, which may pose difficulties in both the evaluation of clinical efficacy and approval by the regulatory authorities. VLP vaccines appear to be promising but still are mostly limited to animal studies. The discovery and development of new and improved vaccines have been greatly facilitated by the application of new technologies. The use of nucleic acid-based vaccines to combine the benefits of in situ expression of antigens with the safety of inactivated and subunit vaccines has been a key advancement. Upon their discovery more than 20 years ago, nucleic acid vaccines promised to be a safe and effective means to mimic immunization with a live organism vaccine, particularly for induction of T cell immunity. In addition, the manufacturing of nucleic acid-based vaccines offered the potential to be relatively simple, inexpensive, and generic. Reverse vaccinology and in silico designing of vaccines are very innovative approaches and are being considered as the future of vaccines. Furthermore, various immuno-therapeutic agents also are being developed to treat and minimize immuno-pathological damage in patients suffering from life-threatening complications. For the treatment of such pathological conditions, various novel approaches such as administration of immune suppressive cytokines, blocking co-stimulatory signals,

or activating co inhibitory signal of T cell activation are being tested both in lab and clinics The Research Topic on influenza virus vaccine and therapeutics will give an insight in to the current status and future scope of these new innovative approaches and technologies Moreover these new methods will also serve as a reference tool for the development of future vaccines against several other pathogens *Contemporary Challenges for Cyber Security and Data Privacy* Mateus-Coelho, Nuno,Cruz-Cunha, Maria Manuela,2023-10-16 In an era defined by the pervasive integration of digital systems across industries the paramount concern is the safeguarding of sensitive information in the face of escalating cyber threats *Contemporary Challenges for Cyber Security and Data Privacy* stands as an indispensable compendium of erudite research meticulously curated to illuminate the multifaceted landscape of modern cybercrime and misconduct As businesses and organizations pivot towards technological sophistication for enhanced efficiency the specter of cybercrime looms larger than ever In this scholarly research book a consortium of distinguished experts and practitioners convene to dissect analyze and propose innovative countermeasures against the surging tide of digital malevolence The book navigates the intricate domain of contemporary cyber challenges through a prism of empirical examples and intricate case studies yielding unique and actionable strategies to fortify the digital realm This book dives into a meticulously constructed tapestry of topics covering the intricate nuances of phishing the insidious proliferation of spyware the legal crucible of cyber law and the ominous specter of cyber warfare Experts in computer science and security government entities students studying business and organizational digitalization corporations and small and medium enterprises will all find value in the pages of this book
