Vanoirbeek,Cécile Roisin,Ethan V. Munson,2003 We introduce a lazy XSLT interpreter that provides random access to the transformation result This allows efficient pipelining of transformation sequences Nodes of the result tree are computed only upon initial access As these computations have limited fan in sparse output coverage propagates backwards through the pipeline In comparative measurements with traditional eager implementations our approach is on par for complete coverage and excels as coverage becomes sparser In contrast to eager evaluation lazy evaluation also admits infinite intermediate results thus extending the design space for transformation sequences To demonstrate that lazy evaluation preserves the semantics of XSLT we reduce XSLT to the lambda calculus via a functional language While this is possible for all languages most imperative languages cannot profit from the confluence of lambda as only one reduction applies at a time *Standards and Review Manual for Certification in Knowledge Engineering* Milton White,Joe Goldsmith,1990 *DARPA Speech/Language Proceedings 1989* ,1989-05 **Integrated Interactive Computing Systems** Pierpaolo Degano,Erik Sandewall,1983 **Journal of Linguistics** ,2017 *Human Factors and Interactive Computer Systems* Yannis Vassiliou,New York University,1984 This volume reviews mid 1980s research in the development of computer systems that employ advanced technology to meet the needs of an expanding user population while remaining sensitive to human requirements Contributions from researchers in such diverse areas as user interface technology through to controlled experimental evaluations of systems and human factors principles are included in this volume Topics considered includes recommendations for dialogue design views of organizations on human factors graphical and multimedia human computer interaction perspectives for the future of interactive systems and the design of languages for applications in teleconferencing databases for videotex systems and office automation *The Humanities Computing Yearbook 1989-1990* Ian Lancashire,1991 This is the second in a series of comprehensive annual reference guides to the use of computers in all the disciplines of the humanities Like its predecessor this volume provides a taxonomy of the field and an annotated survey of publications research centers text archives and termbanks electronic communications software and hardware relevant to the humanities It also includes special larger entries for important software that offer up to date information and practical help in applying that information to research projects and instruction in colleges and universities For the 1989 1990 edition Lancashire has for the first time appointed an international advisory board of specialists to assist in discovering assembling and evaluating materials for inclusion and to keep up with the rapidly developing nature of the field and its international constituency Lancashire has included many completely new or revised sections including a major new chapter on computing in Law A monumental work of current and enduring value The Humanities Computing Yearbook will prove invaluable to a wide range of students teachers and researchers in humanities and social sciences computational linguistics and related fields in computer science *Human Aspects in Computing: Design and use of interactive systems and information management* Hans-Jörg Bullinger,1991 **Linguistics and Language Behavior Abstracts** ,2009 BLL ,1989

Natural Language Generation Systems David D. McDonald, Leonard Bolc, 2012-12-06 Natural language generation is a field within artificial intelligence which looks ahead to the future when machines will communicate complex thoughts to their human users in a natural way. Generation systems supply the sophisticated knowledge about natural languages that must come into play when one needs to use wordings that will overpower techniques based only on symbolic string manipulation techniques. Topics covered in this volume include discourse theory, mechanical translation, deliberate writing and revision. Natural Language Generation Systems contains contributions by leading researchers in the field. Chapters contain details of grammatical treatments and processing seldom reported on outside of full length monographs. **Design and Development of Knowledge-Based Systems** Giovanni Guida, Carlo Tasso, 1994-07-12 This book focuses on how to develop large scale Knowledge Based Systems within budget and on time. The authors teach step by step techniques through the knowledge based system life cycle from the initial development to maintenance of the system.
