Nature Key Ideas In Geography:

Key Concepts in Geography Nicholas Clifford, Sarah Holloway, Stephen P Rice, Gill Valentine, 2008-12-12 This book clearly outlines key concepts that all geographers should readily be able to explain. It does so in a highly accessible way. It is likely to be a text that my students will return to throughout their degree. Dr Karen Parkhill, Bangor University. The editors have done a fantastic job. This second edition is really accessible to the student and provides the key literature in the key geographical terms of scale, space, time, place and landscape. Dr Elias Symeonakis, Manchester Metropolitan University. An excellent introductory text for accessible overviews of key concepts across human and physical geography. Professor Patrick Devine Wright, Exeter University. Including ten new chapters on nature, globalization, development and risk and a new section on practicing geography, this is a completely revised and updated edition of the best selling standard student resource. Key Concepts in Geography explains the key terms space, time, place, scale, landscape that define the language of geography. It is unique in the reference literature as it provides in one volume concepts from both human geography and physical geography. Four introductory chapters on different intellectual traditions in geography situate and introduce the entries on the key concepts. Each entry then comprises a short definition, a summary of the principal arguments, a substantive 5 000 word discussion, the use of real life examples and annotated notes for further reading. Written in an accessible way by established figures in the discipline, the definitions provide thorough explanations of all the core concepts that undergraduates of geography must understand to complete their degree.

Nature Noel Castree, 2005 Exploring the shifting ways in which geographers have studied nature, this book emphasizes the relationships and differences between human geography, physical geography and resource and hazards geography. The first to consider the topic of nature in modern geography as a whole, this distinctive text looks at all its major meanings from the human body and psyche through to the non-human world and develops the argument that student readers should abandon the idea of knowing what nature is in favour of a close scrutiny of what agendas lie behind competing conceptions of it. It deals with amongst others the following areas: the idea of nature, the nature of geography, de naturalization and re naturalization after nature. As everything from global warming to GM foods becomes headline news, the use and abuse of nature is on the agenda as never before. Synthesizing a wealth of diverse and complex information, this text makes the significant theories, debates and information on nature accessible to students of geography, environmental studies, sociology and cultural studies.
