**Computer Simulation of Thermal Plant Operations** Peter O'Kelly, 2012-11-27 This book describes thermal plant simulation that is dynamic simulation of plants which produce exchange and otherwise utilize heat as their working medium Directed at chemical mechanical and control engineers involved with operations control and optimization and operator training the book gives the mathematical formulation and use of simulation models of the equipment and systems typically found in these industries The author has adopted a fundamental approach to the subject The initial chapters provide an overview of simulation concepts and describe a suitable computer environment Reviews of relevant numerical computation methods and fundamental thermodynamics are followed by a detailed examination of the basic conservation equations The bulk of the book is concerned with development of specific simulation models Care is taken to trace each model derivation path from the basic underlying physical equations explaining simplifying and restrictive assumptions as they arise and relating the model coefficients to the physical dimensions and physical properties of the working materials Numerous photographs of real equipment complement the text and most models are illustrated by numerical examples based on typical real plant operations

Bernhardt,1980 Few detailed studies that involve complex interactions of social economic and technical factors have much direct and immediate impact on the real world This study could well be one of those few exceptions Arthur Bernhardt an internationally known building industry expert recognized as the leading authority on the mobile home industry has compiled in this book overwhelming evidence that applying the efficient methods and techniques of that industry to other older sectors of the building industry will enable the United States and countries around the world to overcome the housing crisis making it possible to divert some of the expenditures for public subsidization of housing to other social priorities Far from advocating an endless sprawl of mobile home parks as the basis for tomorrow s housing Bernhardt states at the outset that as the housing crisis continues to worsen many people are asking whether mobile homes might become a viable housing alternative My personal answer is I hope not Rather his goal is to transfer the innovative spirit and built in efficiencies of the mobile home production and delivery system to a full range of housing configurations Bernhardt reached this conclusion only after overcoming an initial skepticism he originally shared a widespread negative predisposition toward the mobile home industry This basic conclusion is the exact opposite of what I expected to find when I first looked at the mobile home industry years ago Then sharing with many others in the United States a strong bias against this industry I decided to devote a few weeks to writing a negative case study on how notto

industrialize the building industry One of the first findings of this investigation however was startling The mobile home industry is the most efficient building industry in the world The author then undertook a full scale study of all aspects of the industry in a seven year project at MIT He built a staff of more than a hundred professionals in such fields as engineering economics finance law management political science and sociology scattered throughout the country Supported by the U S Department of Housing and Urban Development HUD Bernhardt and his staff conducted thousands of surveys and interviews in all sectors of the building industry and at all levels of government The results of this research were compiled in a massive five volume 5000 page report to HUD Bernhardt s up to the minute book which is richly illustrated with halftones and drawings condenses that report and sets forth in a vigorous and explicit way the conclusions and recommendations that the full weight of the evidence compels
