**Essential Readings in Problem-Based Learning** Andrew Walker, Heather Leary, Cindy Hmelo-Silver, 2015-01-15 Like most good educational interventions problem based learning PBL did not grow out of theory but out of a practical problem Medical students were bored dropping out and unable to apply what they had learned in lectures to their practical experiences a couple of years later Neurologist Howard S Barrows reversed the sequence presenting students with patient problems to solve in small groups and requiring them to seek relevant knowledge in an effort to solve those problems Out of his work PBL was born The application of PBL approaches has now spread far beyond medical education Today PBL is used at levels from elementary school to adult education in disciplines ranging across the humanities and sciences and in both academic and corporate settings This book aims to take stock of developments in the field and to bridge the gap between practice and the theoretical tradition originated by Barrows that underlies PBL techniques *Planning & Changing*, 2016

**Choosing Charters** Joshua L. Glazer, 2018-03-30 Do charter schools strengthen students educational experience What are their social costs This volume brings together a group of premier researchers to address questions about the purposes of charter schools and the role of public policy in shaping the educational agenda Chapter authors explore topics seldom encountered in the current charter school debate such as the challenges faced by charter schools in guaranteeing students civil rights and other legal protections the educational and social implications of current instructional programs designed specifically for low income and minority students the use of charters as school turnaround agents and other issues that lie at the intersection of education politics and social policy Readers across the political spectrum both supporters and critics of charter schools can use this book to inform public policy about the ways in which charters affect diversity and inequality and the potential to devise policies that mitigate the most troublesome social costs of charter schools Book Features Examines how charter schools affect diversity and equity in U S schools Describes how segregation plays out by race ethnicity and income by disability and language minority status and by culture language and religion Considers charter schools within a broader social context of high poverty rates changing demographics and continued housing and school segregation Examines charter schools in the context of a new federal administration that is forging its own path in education and other domains of social policy Includes some of the most prominent researchers and commentators in the field spanning policy research traditions methodological approaches and theoretical perspectives **Standard & Poor's Earnings and Ratings Bond**

**Mergent Bond Record**, 2004      [Social and Non-Social Reward: Neural Mechanisms Implicated in Reward Processing Across Domains and Contexts](#) Johanna M. Jarcho, Jason M. Chein, Amanda E. Guyer, Regina Marie Sullivan, Marijn Van Wingerden, 2020-08-21      **The Psychology Of Sport, Performance And Ethics** Yair Galily, Roy David Samuel, Gershon Tenenbaum, Edson Filho, 2021-04-12      **Neurophysiology in Alzheimer's Disease and Dementia** Davide Vito Moretti, 2016-09-06

Alzheimer's disease AD and dementia are the most common neurodegenerative disorder Since the number of individuals with AD and dementia is expected to increase considerably in the near future reliable treatment and diagnosis are critical EEG and neurophysiological technique could be used as a cost effective screening tool for early detection and diagnosis in the Mild Cognitive Impairment MCI stage The aim in neurophysiology research is to develop signal processing methods that improve the specificity for diagnosing dementia we wish to discover signal features that not only significantly differ in AD patients but also allow us to reliably separate AD patients and control subjects This approach is valuable for clinical purposes as diagnostic tool for dementia and it also more fundamentally contributes to a better understanding of brain dynamics of MCI patients Finally the development of neurophysiological biomarker could be useful in monitoring pharmacological treatments The main focus of this special issue will be on the most recent developments and ideas in the field of EEG and neurophysiology which will enable us to extract features that improve the specificity for diagnosing AD and dementia

*Physical Activity, Self-Regulation, and Executive Control Across the Lifespan* Sean P. Mullen, Peter Hall, 2016-02-05

There is overwhelming evidence linking increased physical activity with positive changes in cognitive functioning and brain health Much of what we know about these interrelationships comes from aerobic exercise training studies with older adults and children This literature has paved the way for the neuroscientific investigation of mechanisms responsible for exercise induced cognitive and brain health enhancement a list that ranges from molecular changes to systemic changes in executive control and neural connectivity A new perspective has also emerged that aims to understand executive control processes that may underlie the regulation of health behavior In accordance with this view physical activity falls under the umbrella of health behaviors that require a substantial amount of executive control Executive control is a limited resource and the aging process depletes this resource People who regularly exercise are said to have higher self regulatory control planning goal shielding and impulse control than irregular exercisers The successful maintenance of physical activity participation in lieu of daily cognitive stressors likely reflects an adaptive resistance to control failures Indeed a handful of studies have shown the relationship between greater executive control and subsequently higher levels of physical activity However little is known about the neural correlates of physical activity adherence or

sedentary behavior with the view that neurocognitive factors have an antecedent and reciprocal influence on these behaviors No research has focused on the brain networks responsible for the self regulation of physical activity which likely overlaps with structures and functions playing critical roles in the regulation of other health behaviors Interdisciplinary investigations are needed to explain the extent to which physical activity self regulation and self regulatory failure is dependent upon or under the influence of executive control processes and brain networks Understanding the degree to which self regulatory resources may be enhanced restored and trained will have enormous implications for basic science and applied fields It is also of great import to understand whether or not physical activity self regulation is a domain specific behavior associated with specific brain networks or to determine the extent to which regulatory network sharing occurs The aim of this Frontiers Research Topic is to curate contributions from researchers in social and cognitive neurosciences and related fields whose work involves the study of physical activity behavior self regulation and executive control For this Research Topic we therefore solicit reviews original research articles and opinion papers which draw theoretical or empirical connections related to sustained physical activity behavior self regulatory strategies cognitive performance and brain structure and function While focusing on work in the neurosciences this Research Topic also welcomes contributions in the form of behavioral studies psychophysiological investigations and methodological innovations This Frontiers Research Topic will carve out new directions for the fields of exercise cognitive and social neurosciences We hope you will consider submitting your work

**An Evaluation of the Relationship Among North Carolina Reading Assessments** Sophia Latrell Crawford-Mapp,2019 The purpose of this study was to extend the Bowles 2014 study in North Carolina to a determine the relationship between the scores of the North Carolina beginning of grade BOG and end of grade EOG reading assessments the scores of the mClass Text Reading and Comprehension TRC assessment and the scores of the CogAT assessment and b determine the degree the TRC CogAT and NC BOG predict scores on the NC EOG reading assessment in third grade classrooms of nine elementary schools This study was conducted in two parts to best address the research questions The first part consisted of descriptive variance and inferential statistics calculated by demographic variables This part described the strength of the relationship between the predictor variable BOG TRC and CogAT and the EOG score on the reading assessment The second part consisted of calculating multiple regression analyses using the assessment scores This part described the predictability of BOG TRC and CogAT to student scale scores on the reading comprehension portion of the EOG This study found that there was a positive correlation and a strong relationship between the NC BOG and NC EOG The NC BOG scores were statistically significant when predicting the NC reading EOG Additionally the second and third grade EOG TRC and the NC EOG had a strong positive correlation and relationship This study will be important for educators to accurately base instructional decisions on existing and newly collected data

**Using Teacher Perceptions to Predict Fifth Grade Science and Mathematics Scores in North Carolina** Jason Federico,2016 The purpose of this study was to

analyze teachers perceptions of their working conditions and to what extent the perceptions impacted 5th grade students achievement in the areas of mathematics and science in North Carolina The 2014 student achievement data in the areas of 5th grade End of Grade EOG scores in mathematics and science were obtained from one randomly selected school in each of the 115 school districts in North Carolina The perceptions of teachers working conditions were extracted from the 2014 teacher working conditions survey results from each of the same randomly selected 115 schools This correlation study used a stepwise multiple regression model to determine which teacher working conditions indicator Time Facilities and Resources Community Support Manage Student Conduct Teacher Leaders School Leadership Professional Development and Instructional Practices had the strongest predictive relationship to the scores on mathematics and science Student achievement data were reported as composite scores that were calculated by adding the percentage of students who scored a 3 4 and 5 considered grade level on each test This research study will help schools determine which teacher perceptions of working conditions have the strongest predictive relationship to elementary student achievement in mathematics and science The findings of this research study specified that the indicators in the North Carolina Teacher Working Conditions survey could predict 5th grade student test scores in science and mathematics The indicators of Managing Student Conduct School Leadership and Community Support and Involvement were significantly correlated to 5th grade EOG science scores In addition a significant correlation was discovered between the indicator of Community Support and Involvement and 5th grade EOG mathematics scores Overall the strongest predictive relationship to both science and mathematics scores was from the indicator of Community S
