Steering Sustainability in an Urbanising World Dr Anitra Nelson, 2012-11-28 Sustainability has become the key challenge for urban planners, housing and infrastructure policy makers. Citizens are increasingly encouraged to live more compactly in denser urban developments to use less water and other natural resources and to choose public transport. While councils, government agencies and private business invest in a broad range of promotions offering discounts on sustainable products and services, uptake has been slow and the impacts marginal at a time when environmental stresses suggest that we must act fast. This book examines this pressing problem in a holistic way, discussing broad scale sustainability policies and programmes for achieving sustainable urban futures. It brings together academics and practitioners to analyze the complexity and interdependence of principles, models, processes and practices of sustainability in a range of integrated sectors as well as the establishment and maintenance of sustainable physical infrastructure in cities.

Digital Materialities Sarah Pink, Elisenda Ardevol, Debora Lanzini, 2020-05-26 As the distinction between the digital and the material world becomes increasingly blurred, the ways in which we think about design are also shifting and evolving. How can the human, digital and material be brought together to intervene in the world? What constitutes our digital material environments? How can we engage with digital technologies to make sustainable, healthy and meaningful decisions both now and in the future? Digital Materialities presents twelve chapters by scholars and practitioners working at the intersection between design and digital research in the UK, Spain, Australia and the USA. By incorporating in-depth understandings of the digital material world from both the social sciences and design, the book considers how this combined

knowledge might advance our capacity to design for the future Divided into three parts the focus of the book moves from the theoretical to the practical how different digital materialities are imagined and emerge through software emulation urban sensors and smart homes how new digital designs are sparked through collaborations between social scientists and designers and finally how digital design emerges from the insider work of everyday designers A fascinating ground breaking book for students and scholars of digital anthropology media and communication and anyone interested in the future of digital design
