**Why Electric Cars Do Not Warrant The Investment, The Problems With Buying An Electric Vehicle, The Criteria For How To Determine If A Car Is Worth The Investment, And How To Earn Substantial Money Online So That You Can Afford To Finance Your Electric Car** Dr Harrison Sachs,2020-02-07 This essay sheds light on why why electric cars do not warrant the investment and also elucidates the the problems with buying an electric vehicle Moreover the criteria for how to determine if a car is worth the investment is delineated in this essay Furthermore how to earn substantial money online so that you can afford to finance your electric vehicle purchase is expounded upon in this essay In spite of their touted merits electric cars unequivocally do not warrant the investment Even though electric cars operate more efficiently than gasoline powered vehicles and can therefore save you money on fuel costs and vehicle maintenance services these vehicle running costs savings reaped over the course of ample years will not be substantial enough to even offset 50% of the exorbitant premium paid upfront to procure the electric vehicle over a gasoline powered vehicle Electric vehicles tend to rapidly depreciate in value and are therefore not a prudent investment in your future Moreover charging times for an electric vehicle are long electricity prices are on the rise the lithium ion battery in electric vehicles is deemed a potential fire hazard and there is a lack of electric vehicle service centers which ultimately means that there are an abject lack of technicians who are competent in servicing electrical vehicles Even though the cost of operating an electric vehicle if you already paid for it in full would be

roughly one third of the cost of operating a gasoline powered vehicle these savings reaped overtime on vehicle running costs such as vehicle maintenance costs and fuel costs do not offset the premium of 20 000 50 000 exhausted upfront to procure an electric vehicle over a gasoline powered vehicle The average cost of an electric vehicle is 55 000 while the average cost of a gasoline powered four door sedan is 35 000 Even though the engine of an electric vehicle has less moving parts such as fan belts and spark plugs which saves you money on replacement parts and service costs every year the average yearly savings in maintenance for an electric vehicle owner is only approximately 800 a year Electric Cars VS 2019 even though you may have to pay a premium of at least 20 000 upfront to procure an electric vehicle over a gasoline powered vehicle As per operating costs to drive the vehicle the breakdown for a gas powered car VS an electric car comes out to be 9 83 per 100 miles for a gas car and 5 27 per 100 miles for an electric vehicle When directly compared the cost to power an electric vehicle is about half of what it costs to fuel your gas powered car It is important to note that pricing for power varies depending on your utility company and how they charge for power For example some utility companies charge higher Time Of Use TOU rates for things like peak hour usage where the price of power is higher between 4 pm and 9 pm Electric Cars VS 2019 While this may seem enticing to be able to save on fuel costs by owning an electric vehicle you will not drive your electric vehicle enough to defray the 20 000 premium paid to procure it over a gasoline powered vehicle by saving on fuel costs and vehicle maintenance costs Much to the chagrin of electric vehicle owners electric vehicles are not the most economical vehicles to own Owning and operating a new vehicle in 2017 costed a driver an average of 8 469 annually or 706 each month according to a new study from AAA The annual evaluation of driving costs reveals that small sedans are the least expensive vehicles to drive at 6 354 annually followed by small SUVs at 7 606 annually and hybrids at 7 687 annually New to the Your Driving Costs study in 2017 AAA found that electric vehicles have driving costs at 8 439 per year Without a gasoline engine to maintain electric vehicles have the lowest annual maintenance and repair costs at 982 per year Costs To Own 2017

**What You Really Need to Know About Electric Vehicles** Terry Fitzgerald,2020-12-20 Thinking about buying an electric vehicle If so read this book first to make sure you have all the necessary facts so that you can make the best possible decision Be wary Many of the people you approach can t even answer your basic questions I CAN Some will intentionally or unwittingly give you false information Even things on the internet that look legitimate can be misleading or incomplete You have the power to make good choices

when you have the right information That is what this book is all about By the end you will know everything you must know to have the confidence you need to make this important decision Why ME Over the past three years I have conducted hundreds of conversations and test drives with prospective buyers as a contracted Product Specialist for Plug n Drive at the Electric Vehicle Discovery Centre EVDC in Toronto Canada on road trips at school presentations and at 4 major international auto shows During that time span I have driven 20 different models of EVs and PHEVs from 13 different manufacturers on a regular basis The test drives and conversations educated me on what people want to know about EVs and what they have been told many times from ill informed sources or those wishing to discourage their interest I want to be the voice of reason by informing readers with little or no prior exposure to electric vehicles To my horror as I researched my topics to validate my input I discovered how hard it is to locate useful trustworthy information about many seemingly common and relatively simple queries If I struggle with all my knowledge I can t imagine what you have faced in your quest for valid info Don t leave anything to chance Be prepared this book will help What you will learn The history of EVs from the beginning to modern times Types of electric vehicles PHEV plug in hybrids and BEV battery electric vehicle How EV PHEVs work Some things about batteries Charging your EV at home and on the road Cost comparison owning a BEV or PHEV vs a gas car Other stuff you should know Non plug in hybrids are not included in this book My expertise and focus have been on plug in hybrids and fully electric vehicles from the beginning Busting some myths Also sprinkled throughout the book are several popular BEV PHEV myths you should be aware of and the importance of knowing the truth good or bad We encourage readers to continue their own research into the areas for which they would like more detailed specific information Hopefully this book will prepare you to make more effective inquiries As much as I enjoy driving BEVs and PHEVs I am not personally appealing to you to buy one One of the cardinal rules at the Centre was that we do not sell cars we provide education about them That is an important personal decision and should not be made without considering the kinds of issues I raise in the book and how they relate to you When you have completed the book you will be better informed to make an appropriate decision about the purchase of an electric vehicle

**The Complete Book of Electric Vehicles** Sheldon R. Shacket,1981 **EV - Electric Vehicles Come Home** Dale Stubbart,2021-06-20 In my first book on Electric Cars I covered those which were available in the US In my new book I decided to cover the world I also venture into Electric Planes and EVTOLS Electric Vertical Takeoff and Landing machines Even though EVs are very interesting you might get bored after the 100th or so To relieve your boredom I inserted stories about my visits from a couple of outer space aliens who are very interested in Electric Cars Who says you can t mix research books with sci fi and humor I start with the most popular EVs I cover many parts of the globe And I cover lesser known Electric cars Some places around the world don t have good roads or the roads are too crowded There electric motorcycles rickshaws and other vehicles are more popular than electric cars And did you know that there s an electric skateboard Electric Cars come in several models Sedans SUVs Crossovers Hatchbacks etc There are even little

electric bubble cars And there s a Amphibious E Tricycle Camper Now is a good time to get into an EV there s availability You ll get good range And you ll save money on gas and maintenance Besides bans on ICE vehicles internal combustion engine petrol powered cars are coming Maybe not tomorrow but soon And supermost of all owning an EV is cool and the wave of the future And you want to get into the action now because you want to ride the crest of the wave Some people are still worried about what happens if the battery dies I cover that Good news not a problem I also cover converting your car to an EV or rather hiring someone to do that for you and EV Rentals I conclude the book with what it would take to own an EV Dealership My EV choices and statements by World Leaders on EVs I evaluate the more popular cars and provide a blank evaluation form so you can make your own evaluations This book is packed with information but I keep it light so you won t get bored Actually that s not true I kept it light so that I wouldn t get bored      Electric Vehicles and Rose Colored Glasses

Mark a Ashford,2021-02-16 This book is about Electrically Powered Vehicles EVs So many comparisons on YouTube so many stories about their advantages and in the media articles comparing them to internal combustion engine powered vehicles Uniformly gasoline powered vehicles gas guzzlers are cast as polluters and bad The environment moving people off gas powered vehicles and into EVs is something for politicians and interested parties to set goals around for when we will remove from them from our lives our existence EVs are to be welcomed their purchase cost is subsidized from taxation The proud new EV owner drives away in their new vehicle to do what plugin and drive There are consequences to driving off a dealer s lot in a new EV Consequences many reviewers do not take into account knowingly or not There are gross errors in comparison of EVs and gasoline powered vehicles which the current low level of adoption of EVs does not mention This is not an attempt to set straight the comparisons that would take far to long But just as the internal combustion engine changed the world EVs will do so as well I need to set some boundaries to this book I do not own an EV and do not see one in my future I do not have solar power I am not an electrician I am not a mechanic or a scientist Most of the videos and comments made on EVs and home solar power installations are heavy on the cost benefit ratios leveraging government subsidies and claiming rebates and rebate processes EVs travel and home solar installations is not a plug and play scenario I do not promote or denigrate any particular manufacturer because I have no first hand experience to draw from But it is safe to say Tesla will come up a lot as they are the poster boy girl for EV cars I live in Ontario Canada Most of my examples and comments are relative to my home Province and country because that is my experience Refence to comments and information from other jurisdictions of course will be made However the principals discussed here and the examples shown can be a basis for you the reader to perform the same analysis in your own jurisdiction The Province of Ontario covers 1 076 million km2 has a population of 14 57 million It borders four of the five Great Lakes of North America Lake Superior Lake Huron Lake Erie and Lake Ontario in the south It stretches all the way up to Hudson s Bay in the North This book is about taking off the rose colored glasses many people are wearing and looking at the consequence of widespread EV adoption Above all it is about

evening out the comparisons many commentators are making and the practical implications for all of us
