Multimedia Semantics The Role Of Metadata Studies In Computational Intelligence:

Applications of Computational Intelligence in Biology Tomasz G. Smolinski, Mariofanna G. Milanova, Aboul-Ella Hassanien, 2008-06-10 Computational Intelligence CI has been a tremendously active area of search for the past decade or so. There are many successful applications of CI in many subfields of biology including bioinformatics, computational economics, protein structure prediction, or neuronal systems modeling and analysis. However, there still are many open problems in biology that are in desperate need of advanced and efficient computational methodologies to deal with tremendous amounts of data that those problems are plagued by. Fortunately, biology researchers are very often unaware of the abundance of computational techniques that they could put to use to help them analyze and understand the data underlying their research inquiries. On the other hand, computational intelligence practitioners are often unfamiliar with the particular problems that their new state-of-the-art algorithms could be successfully applied for. The separation between the two worlds is partially caused by the use of different languages in these two spheres of science but also by the relatively small number of publications devoted solely to the purpose of facilitating the exchange of new computational algorithms and methodologies on one hand and the needs of the biology realm on the other. The purpose of this book is to provide a medium for such an exchange of expertise and concerns. In order to achieve the goal, we have solicited contributions from both computational intelligence as well as biology researchers.

Advanced Computational Intelligence Paradigms in Healthcare - 3 Margarita Sordo, Sachin Vaidya, 2008-06-26 This volume details the latest state of the art research on computational intelligence paradigms in healthcare in the intelligent agent environment. The book presents seven chapters selected from the rapidly growing application areas of computational intelligence to healthcare systems. These include intelligent synthetic characters, man-machine interface, menu generators, analysis of user acceptance, pictures archiving and communication systems.

The 36 revised full papers and 8 short papers presented were carefully reviewed and selected from 192 submissions. They deal with topics such as e-learning platforms and tools, technology-enhanced learning, web-based learning for oriental languages, mobile situated e-learning, learning resource deployment, organization and management, design model and framework of e-learning systems, e-learning metadata and standards, collaborative learning, and game-based learning, as well as practice and experience sharing and pedagogical issues.
