Multimodal Interactive Pattern Recognition And Applications:

Multimodal Interactive Pattern Recognition and Applications Alejandro Héctor Toselli, Enrique Vidal, Francisco Casacuberta, 2011-05-18 This book presents a different approach to pattern recognition PR systems in which users of a system are involved during the recognition process. This can help to avoid later errors and reduce the costs associated with post processing. The book also examines a range of advanced multimodal interactions between the machine and the users including handwriting, speech and gestures. Features presents an introduction to the fundamental concepts and general PR approaches for multimodal interaction modeling and search or inference provides numerous examples and a helpful Glossary discusses approaches for computer assisted transcription of handwritten and spoken documents examines systems for computer assisted language translation interactive text generation and parsing relevance based image retrieval and interactive document layout analysis reviews several full working prototypes of multimodal interactive PR applications including live demonstrations that can be publicly accessed on the Internet

Multimodal Interaction in Image and Video Applications Angel D. Sappa, Jordi Vitrià, 2013-01-11 Traditional Pattern Recognition PR and Computer Vision CV technologies have mainly focused on full automation even though full automation often proves elusive or unnatural in many applications where the technology is expected to assist rather than replace the human agents. However not all the problems can be automatically solved being the human interaction the only way to tackle those applications. Recently multimodal human interaction has become an important field of increasing interest in the research community. Advanced man machine interfaces with high cognitive capabilities are a hot research topic that aims at solving challenging problems in image and video applications. Actually the idea of computer interactive systems was already proposed on the early stages of computer science. Nowadays the ubiquity of image sensors together with the ever increasing computing performance has open new and challenging opportunities for research in multimodal human interaction. This book aims to show how existing PR and CV technologies can naturally evolve using this new paradigm. The chapters of this book show different successful case studies of multimodal interactive technologies for both image and video applications. They cover a wide spectrum of applications ranging from interactive handwriting transcriptions to human robot interactions in real environments.

Advances in Artificial Intelligence -- IBERAMIA 2012 Juan Pavón, Néstor D. Duque-Méndez, Rubén Fuentes Fernández, 2012-11-15 This book constitutes the refereed proceedings of the 13th Ibero American Conference on Artificial Intelligence IBERAMIA 2012 held in Cartagena de Indias Colombia in November 2012. The 75 papers presented were carefully reviewed and selected from 170 submissions. The papers are organized in topical sections on knowledge representation and reasoning, information and knowledge processing, knowledge discovery and data mining, machine learning, bio inspired computing, fuzzy systems, modelling and simulation, ambient intelligence, multi agent systems, human computer interaction, natural language processing, computer vision and robotics, planning and scheduling, AI in education and knowledge engineering and applications.

Machine Learning for Multimodal Interaction Andrei Popescu-Belis, Steve Renals, Hervé Bourlard, 2008-02-22 This book constitutes the thoroughly refereed post proceedings of the 4th International Workshop on Machine Learning for Multimodal Interaction MLMI 2007 held in Brno Czech Republic in June 2007 The 25 revised full papers presented together with 1 invited paper were carefully selected during two rounds of reviewing and revision from 60 workshop presentations The papers are organized in topical sections on multimodal processing HCI user studies and applications image and video processing discourse and dialogue processing speech and audio processing as well as the PASCAL speech separation challenge

[Spoken, Multilingual and Multimodal Dialogue Systems](#) Ramon Lopez Cozar Delgado, Masahiro Araki, 2005-11-11 Dialogue systems are a very appealing technology with an extraordinary future Spoken Multilingual and Multimodal Dialogues Systems Development and Assessment addresses the great demand for information about the development of advanced dialogue systems combining speech with other modalities under a multilingual framework It aims to give a systematic overview of dialogue systems and recent advances in the practical application of spoken dialogue systems Spoken Dialogue Systems are computer based systems developed to provide information and carry out simple tasks using speech as the interaction mode Examples include travel information and reservation weather forecast information directory information

and product order Multimodal Dialogue Systems aim to overcome the limitations of spoken dialogue systems which use speech as the only communication means while Multilingual Systems allow interaction with users that speak different languages. Presents a clear snapshot of the structure of a standard dialogue system by addressing its key components in the context of multilingual and multimodal interaction and the assessment of spoken multilingual and multimodal systems. In addition to the fundamentals of the technologies employed the development and evaluation of these systems are described. Highlights recent advances in the practical application of spoken dialogue systems. This comprehensive overview is a must for graduate students and academics in the fields of speech recognition speech synthesis speech processing language and human computer interaction technology. It will also prove to be a valuable resource to system developers working in these areas. Multimodal signal processing is an important research and development field that processes signals and combines information from a variety of modalities speech vision language text which significantly enhance the understanding modelling and performance of human computer interaction devices or systems enhancing human communication. The overarching theme of this book is the application of signal processing and statistical machine learning techniques to problems arising in this multi disciplinary field. It describes the capabilities and limitations of current technologies and discusses the technical challenges that must be overcome to develop efficient and user friendly multimodal interactive systems. With contributions from the leading experts in the field the present book should serve as a reference in multimodal signal processing for signal processing researchers graduate students R D engineers and computer engineers.
