## My Body Science S:

**Foundations of Morality, Human Rights, and the Human Sciences** Anna-Teresa Tymieniecka, Calvin O. Schrag, 2012-12-06 The essays in this volume constitute a portion of the research program being carried out by the International Society for Phenomenology and the Human Sciences Established as an affiliate society of the World Institute for Advanced Phenomenological Research and Learning in 1976 in Arezzo Italy by the president of the Institute Dr Anna Teresa Tymieniecka this particular society is devoted to an exploration of the relevance of phenomenological methods and insights for an understanding of the origins and goals of the specialised human sciences The essays printed in the first part of the book were originally presented at the Second Congress of this society held at Purdue University West Lafayette Indiana 12-14 July 1979 The second part of the volume consists of selected essays from the third convention the Eleventh International Congress of Phenomenology of the World Phenomenology Institute held in Cambridge Massachusetts in 1981 With the third part of this book we pass into the Human Rights issue as treated by the World Phenomenology Institute at the Interamerican Philosophy Congress held in Tallahassee Florida also in 1981 The volume opens with a monograph by Anna Teresa Tymieniecka on the foundations of ethics in the moral practice within the life world and the social world shown as clearly distinct The main ideas of this work had been presented by Tymieniecka as lead lectures to the three conferences giving them a tight research project consistency *Recovering the Body* Carol Collier, 2013-06-08 A philosophical history of the body and a work of recovery bringing to light many aspects of this history that have been lost or forgotten in the West after the Scientific Revolution *Phenomenology and the Natural Sciences* Joseph J. Kockelmans, Theodore J. Kisiel, 1970 **The Index**, 1878 *The Proceedings of the Scientific Meetings of the Zoological Society of London* Zoological Society of London, 1890 *A Survey of the Forensic Sciences* Randall Skelton, 2011-01-14 Exploring the broad spectrum of the forensic sciences practiced both inside and outside of a crime lab this text investigates forensic sciences that are used both in criminal and civil contexts along with non traditional and new applications such as occupational fraud wildlife protection and homeland security The approach is unifying in that it seeks to explain the underlying theoretical and practical concepts that unite all forensic science as well as the individual challenges of each of the forensic sciences The scientific concepts that underly the forensic sciences are explained in a manner that is understandable by readers without a science background *English Mechanic and World of Science*, 1891 *A Reference Handbook of the Medical Sciences* Albert Henry Buck, 1889 *Memoirs of the National Academy of Sciences* National Academy of Sciences (U.S.), 1895 Each volume comprises one or more monographs many of which are issued also as separates **Spatial and Non-Spatial Aspects of Neglect** Konstantinos Priftis, Carlo Umiltà, Marco Zorzi, Mario Bonato, 2015-07-10 Neglect is one of the most impressive neuropsychological disorder for both its theoretical and clinical relevance Besides being very common and disabling it is highly informative for understanding normal cognitive functioning The hallmark of neglect is the failure to attend to the

contralesional hemispace. However, several studies have recently highlighted that additional deficits not attributable to a spatial bias are associated to the impaired contralesional hemispace processing. Moreover, manifestations of neglect tend to be particularly heterogeneous and often dissociate according to the spatial domain being investigated e.g. body space, space within/reaching space, beyond/reaching imaginal space. Heterogeneity in neglect patients also means that dissociations across different tasks in a single patient are more the rule than the exception. Evidence suggests that some of these dissociations can be readily explained by taking into account the amount of available attentional resources as a major determinant for the presence and the severity of neglect. There is no doubt that neglect patients provide a wealth of information about the functioning of systems subserving attentional orienting and spatial processing. Moreover, their performance also shows that some non spatial deficits are tightly coupled with more classic contralesional spatial deficits. It seems however still unclear to what extent these non spatial deficits are an intrinsic characteristic of neglect or whether they are to be considered unspecific effects of the often massive brain lesions suffered by the patients. From the clinical point of view, neglect is a disorder that dramatically affects patients and their caregivers because it severely limits the individuals' autonomy and motor recovery after brain damage. For these reasons, neglect is a disorder that is worth rehabilitating. To be effective, neglect rehabilitation should be based on the knowledge of what cognitive aspects are impaired and it should be focused on improving daily life performance. For these reasons, it is also important to detect and quantify subtle forms of neglect.
