Choosing Charters Iris C. Rotberg, Joshua L. Glazer, 2018 Do charter schools strengthen students educational experience What are their social costs This volume brings together a group of premier researchers to address questions about the purposes of charter schools and the role of public policy in shaping the educational agenda Chapter authors explore topics seldom encountered in the current charter school debate such as the challenges faced by charter schools in guaranteeing students civil rights and other legal protections the educational and social implications of current instructional programs designed specifically for low income and minority students the use of charters as school turnaround agents and other issues that lie at the intersection of education politics and social policy Readers across the political spectrum both supporters and critics of charter schools can use this book to inform public policy about the ways in which charters affect diversity and inequality and the potential to devise policies that mitigate the most troublesome social costs of charter schools Contributors include Adam Gamoran Jeffrey R Henig Henry M Levin Roslyn Arlin Mickelson Janelle Scott and Kevin Welner This is an excruciatingly important work At this point in time it is essential to understand whether and in what ways charter schools contribute to segregation and how they might avoid doing so Mindy L Kornhaber Pennsylvania State University Standard & Poor's Earnings and Ratings Bond Guide ,2009 **Bond Guide** ,2010 **Proceedings of International Conference on Computational Intelligence and Computing** Jyotsna Kumar Mandal, Joyanta Kumar Roy, 2021-07-28 This book includes the original peer reviewed research articles from the International Conference on Computational Intelligence and Computing ICCIC 2020 held in September 2020 on a virtual platform jointly organized by SR Group of Institutions Jhansi India IETE Kolkata Centre India and Eureka Sciencetech Research Foundation Kolkata India It covers the latest research in image processing computer vision and pattern recognition machine learning data mining big data and analytics information security and privacy wireless and sensor networks and IoT applications artificial intelligence expert systems natural language processing image processing computer vision artificial neural networks fuzzy logic evolutionary optimization rough sets web intelligence intelligent agent technology virtual reality and visualization *The Psychology Of Sport, Performance And Ethics* Yair Galily, Roy David Samuel, Gershon Tenenbaum, Edson Filho, 2021-04-12 **Standard & Poor's Bond Guide** Standard and Poor's Corporation, 2006 **Gamification: Concepts, Methodologies, Tools, and Applications** Management Association, Information Resources, 2015-03-31 Serious games provide a unique opportunity to engage students more fully than traditional teaching approaches Understanding the best way to utilize games and play in an educational setting is imperative for effectual learning in the twenty first century Gamification Concepts Methodologies Tools and Applications investigates the use of games in education both inside and outside of the classroom and how this field once thought to be detrimental to student learning can be used to augment more formal models This four volume reference work is a premier source for educators administrators software designers and all stakeholders in all levels of education **Social**

Johanna M. Jarcho, Jason M. Chein, Amanda E. Guyer, Regina Marie Sullivan, Marijn Van Wingerden, 2020-08-21 *Physical Activity, Self-Regulation, and Executive Control Across the Lifespan* Sean P. Mullen, Peter Hall, 2016-02-05 There is overwhelming evidence linking increased physical activity with positive changes in cognitive functioning and brain health. Much of what we know about these interrelationships comes from aerobic exercise training studies with older adults and children. This literature has paved the way for the neuroscientific investigation of mechanisms responsible for exercise-induced cognitive and brain health enhancement: a list that ranges from molecular changes to systemic changes in executive control and neural connectivity. A new perspective has also emerged that aims to understand executive control processes that may underlie the regulation of health behavior. In accordance with this view, physical activity falls under the umbrella of health behaviors that require a substantial amount of executive control. Executive control is a limited resource, and the aging process depletes this resource. People who regularly exercise are said to have higher self-regulatory control, planning, goal shielding, and impulse control than irregular exercisers. The successful maintenance of physical activity participation in lieu of daily cognitive stressors likely reflects an adaptive resistance to control failures. Indeed, a handful of studies have shown the relationship between greater executive control and subsequently higher levels of physical activity. However, little is known about the neural correlates of physical activity adherence or sedentary behavior, with the view that neurocognitive factors have an antecedent and reciprocal influence on these behaviors. No research has focused on the brain networks responsible for the self-regulation of physical activity, which likely overlaps with structures and functions playing critical roles in the regulation of other health behaviors. Interdisciplinary investigations are needed to explain the extent to which physical activity self-regulation and self-regulatory failure is dependent upon or under the influence of executive control processes and brain networks. Understanding the degree to which self-regulatory resources may be enhanced, restored, and trained will have enormous implications for basic science and applied fields. It is also of great import to understand whether or not physical activity self-regulation is a domain-specific behavior associated with specific brain networks or to determine the extent to which regulatory network sharing occurs. The aim of this Frontiers Research Topic is to curate contributions from researchers in social and cognitive neurosciences and related fields whose work involves the study of physical activity behavior, self-regulation, and executive control. For this Research Topic, we therefore solicit reviews, original research articles, and opinion papers which draw theoretical or empirical connections related to sustained physical activity behavior, self-regulatory strategies, cognitive performance, and brain structure and function. While focusing on work in the neurosciences, this Research Topic also welcomes contributions in the form of behavioral studies, psychophysiological investigations, and methodological innovations. This Frontiers Research Topic will carve out new directions for the fields of exercise, cognitive, and social neurosciences. We hope you will consider submitting your work.
