*Compression of an array of similar crash test simulation results* Stefan Peter Müller, 2022-02-08 Big data thrives on extracting knowledge from a large number of data sets But how is an application possible when a single data set is several gigabytes in size The innovative data compression techniques from the field of machine learning and modeling using Bayesian networks which have been theoretically developed and practically implemented here can reduce these huge amounts of data to a manageable size By eliminating redundancies in location time and between simulation results data reductions to less than 1% of the original size are possible The developed method represents a promising approach whose use goes far beyond the application example of crash test simulations chosen here [Advances in Internet, Data & Web Technologies](#) Leonard Barolli, Elis Kulla, Makoto Ikeda, 2022-02-01 This book presents original contributions to the theories and practices of emerging Internet data and Web technologies and their applicability in businesses engineering and academia Internet has become the most proliferative platform for emerging large scale computing paradigms Among these data and Web technologies are two most prominent paradigms in a variety of forms such as Data Centers Cloud Computing Mobile Cloud Mobile Web Services and so on These technologies altogether create a digital ecosystem whose corner stone is the data cycle from capturing to processing analysis and visualization The investigation of various research and development issues in this digital ecosystem is boosted by the ever increasing needs of real life applications which are based on storing and processing large amounts of data As a key feature it addresses advances in the life cycle exploitation of data generated from the digital ecosystem data technologies that create value for the knowledge and businesses toward a collective intelligence approach Researchers software developers practitioners and students interested in the field of data and Web technologies find this book useful and a reference for their activity *Web Technologies and Applications* Feifei Li, Kyuseok Shim, Kai Zheng, Guanfeng Liu, 2016-09-16 This LNCS double volume LNCS 9931 9932 constitutes the refereed proceedings of the 18th Asia Pacific Conference APWeb 2016 held in Suzhou China in September 2016 The 79 full papers and presented together with 24 short papers and 17 demo papers were carefully reviewed and selected from 215 submissions the focus of the conference was on following subjects Spatio temporal Textual and Multimedia Data Management Social Media Data Analysis Modelling and Learning with Big Data Streaming and Real time Data Analysis Recommendation System Data Quality and Privacy Query Optimization and Scalable Data Processing **IBM FlashSystem Best Practices and Performance Guidelines for IBM Spectrum Virtualize Version 8.4.2** Antonio Rainero, Carlton Beatty, David Green, Hartmut Lonzer, Jonathan Wilkie, Kendall Williams, Konrad Trojok, Mandy Stevens, Nezih Boyacıoglu, Nils Olsson, Renato Santos, Rene Oehme, Sergey Kubin, Thales Noivo Ferreira, Uwe Schreiber, Vasfi Gucer, IBM Redbooks, 2022-02-02 This IBM Redbooks publication captures several of the preferred practices and describes the performance gains that can be achieved by implementing the IBM FlashSystem products that are powered by IBM Spectrum Virtualize Version 8 4 2 These practices are

Gammerman,Glenn Shafer,2022-12-13 This book is about conformal prediction an approach to prediction that originated in machine learning in the late 1990s The main feature of conformal prediction is the principled treatment of the reliability of predictions The prediction algorithms described conformal predictors are provably valid in the sense that they evaluate the reliability of their own predictions in a way that is neither over pessimistic nor over optimistic the latter being especially dangerous The approach is still flexible enough to incorporate most of the existing powerful methods of machine learning The book covers both key conformal predictors and the mathematical analysis of their properties Algorithmic Learning in a Random World contains in addition to proofs of validity results about the efficiency of conformal predictors The only assumption required for validity is that of randomness the prediction algorithm is presented with independent and identically distributed examples in later chapters even the assumption of randomness is significantly relaxed Interesting results about efficiency are established both under randomness and under stronger assumptions Since publication of the First Edition in 2005 conformal prediction has found numerous applications in medicine and industry and is becoming a popular machine learning technique This Second Edition contains three new chapters One is about conformal predictive distributions which are more informative than the set predictions produced by standard conformal predictors Another is about the efficiency of ways of testing the assumption of randomness based on conformal prediction The third new chapter harnesses conformal testing procedures for protecting machine learning algorithms against changes in the distribution of the data In addition the existing chapters have been revised updated and expanded     **IBM SAN Volume Controller Best Practices and**
