The International Conference on Machine Learning and Data Mining MLDM is the third meeting in a series of biennial events which started in 1999 organized by the Institute of Computer Vision and Applied Computer Sciences IBaI in Leipzig MLDM began as a workshop and is now a conference and has brought the topic of machine learning and data mining to the attention of the research community Seventy ve papers were submitted to the conference this year The program committee worked hard to select the most progressive research in a fair and competent review process which led to the acceptance of 33 papers for presentation at the conference The 33 papers in these proceedings cover a wide variety of topics related to machine learning and data mining The two invited talks deal with learning in case based reasoning and with mining for structural data The contributed papers can be grouped into nine areas support vector machines pattern classification decision trees clustering classification and retrieval case based reasoning Bayesian models and methods association rules and applications We would like to express our appreciation to the reviewers for their precise and highly professional work We are grateful to the German Science Foundation for its support of the Eastern European researchers We appreciate the help and understanding of the editorial staff at Springer Verlag and in particular Alfred Hofmann who supported the publication of these proceedings in the LNAI series Last but not least we wish to thank all the speakers and participants who contributed to the success of the conference **Data Analysis and Pattern Recognition in Multiple Databases** Animesh Adhikari,Jhimli Adhikari,Witold Pedrycz,2013-12-09 Pattern recognition in data is a well known classical

problem that falls under the ambit of data analysis As we need to handle different data the nature of patterns their recognition and the types of data analyses are bound to change Since the number of data collection channels increases in the recent time and becomes more diversified many real world data mining tasks can easily acquire multiple databases from various sources In these cases data mining becomes more challenging for several essential reasons We may encounter sensitive data originating from different sources those cannot be amalgamated Even if we are allowed to place different data together we are certainly not able to analyze them when local identities of patterns are required to be retained Thus pattern recognition in multiple databases gives rise to a suite of new challenging problems different from those encountered before Association rule mining global pattern discovery and mining patterns of select items provide different patterns discovery techniques in multiple data sources Some interesting item based data analyses are also covered in this book Interesting patterns such as exceptional patterns icebergs and periodic patterns have been recently reported The book presents a thorough influence analysis between items in time stamped databases The recent research on mining multiple related databases is covered while some previous contributions to the area are highlighted and contrasted with the most recent developments

**Data Mining in Pattern Recognition** Petra Perner,Maria Petrou,1999-09-08 The field of machine learning and data mining in connection with pattern recognition enjoys growing popularity and attracts many researchers Automatic pattern recognition systems have proven successful in many applications The wide use of these systems depends on their ability to adapt to changing environmental conditions and to deal with new objects This requires learning capabilities on the parts of these systems The exceptional attraction of learning in pattern recognition lies in the specific data themselves and the different stages at which they get processed in a pattern recognition system This results a specific branch within the field of machine learning At the workshop were presented machine learning approaches for image pre processing image segmentation recognition and interpretation Machine learning systems were shown on applications such as document analysis and medical image analysis Many databases are developed that contain multimedia sources such as images measurement protocols and text documents Such systems should be able to retrieve these sources by content That requires specific retrieval and indexing strategies for images and signals Higher quality database contents can be achieved if it were possible to mine these databases for their underlying information Such mining techniques have to consider the specific characteristic of the image sources The field of mining multimedia databases is just starting out We hope that our workshop can attract many other researchers to this subject

**Machine Learning and Data Mining in Pattern Recognition** Petra Perner, Atsushi Imiya, 2005-07-08 We met again in front of the statue of Gottfried Wilhelm von Leibniz in the city of Leipzig Leibniz a famous son of Leipzig planned automatic logical inference using symbolic computation aimed to collate all human knowledge Today artificial intelligence deals with large amounts of data and knowledge and finds new information using machine learning and data mining Machine learning and data mining are irreplaceable subjects and tools for the theory of pattern recognition and in applications of pattern recognition such as bioinformatics and data retrieval This was the fourth edition of MLDM in Pattern Recognition which is the main event of Technical Committee 17 of the International Association for Pattern Recognition it started out as a workshop and continued as a conference in 2003 Today there are many international meetings which are titled machine learning and data mining whose topics are text mining knowledge discovery and applications This meeting from the first focused on aspects of machine learning and data mining in pattern recognition problems We planned to reorganize classical and well established pattern recognition paradigms from the viewpoints of machine learning and data mining Though it was a challenging program in the late 1990s the idea has inspired new starting points in pattern recognition and effects in other areas such as cognitive computer vision
