## **Multiscale Modeling Abaqus:**

**Multiscale Modeling in Solid Mechanics** Ugo Galvanetto, M. H. Aliabadi, 2010 This unique volume presents the state of the art in the field of multiscale modeling in solid mechanics with particular emphasis on computational approaches. For the first time contributions from both leading experts in the field and younger promising researchers are combined to give a comprehensive description of the recently proposed techniques and the engineering problems tackled using these techniques. The book begins with a detailed introduction to the theories on which different multiscale approaches are based with regards to linear homogenization as well as various nonlinear approaches. It then presents advanced applications of multiscale approaches applied to nonlinear mechanical problems. Finally the novel topic of materials with self similar structure is discussed.

*Handbook of Dynamic System Modeling* Paul A. Fishwick, 2007-06-01 The topic of dynamic models tends to be splintered across various disciplines making it difficult to uniformly study the subject. Moreover the models have a variety of representations from traditional mathematical notations to diagrammatic and immersive depictions. Collecting all of these expressions of dynamic models the *Handbook of Dynamic Sy*

**Multiscale Modelling in Sheet Metal Forming** Dorel Banabic, 2016-10-20 This book gives a unified presentation of the research performed in the field of multiscale modelling in sheet metal forming over the course of more than thirty years by the members of six teams from internationally acclaimed universities. The first chapter is devoted to the presentation of some recent phenomenological yield criteria BBC 2005 and BBC 2008 developed at the CERTETA center from the Technical University of Cluj Napoca. An overview on the

crystallographic texture and plastic anisotropy is presented in Chapter 2. Chapter 3 is dedicated to multiscale modelling of plastic anisotropy. The authors describe a new hierarchical multi scale framework that allows taking into account the evolution of plastic anisotropy during sheet forming processes. Chapter 4 is focused on modelling the evolution of voids in porous metals with applications to forming limit curves and ductile fracture. The chapter details the steps needed for the development of dissipation functions and Gurson type models for non quadratic anisotropic plasticity criteria like BBC 2005 and those based on linear transformations. Chapter 5 describes advanced models for the prediction of forming limit curves developed by the authors. Chapter 6 is devoted to anisotropic damage in elasto plastic materials with structural defects.

Finally Chapter 7 deals with modelling of the Portevin Le Chatelier PLC effect. This volume contains contributions from leading researchers from the Technical University of Cluj Napoca Romania the Catholic University of Leuven Belgium Clausthal University of Technology Germany Amirkabir University of Technology Iran the University of Bucharest Romania and the Institute of Mathematics of the Romanian Academy Romania. It will prove useful to postgraduate students researchers and engineers who are interested in the mechanical modeling and numerical simulation of sheet metal forming processes.
