Computational Intelligence and Optimization Methods for Control Engineering Maude Josée Blondin, Panos M. Pardalos, Javier Sanchis Sáez, 2019-09-20 This volume presents some recent and principal developments related to computational intelligence and optimization methods in control. Theoretical aspects and practical applications of control engineering are covered by 14 self contained contributions. Additional gems include the discussion of future directions and research perspectives designed to add to the reader's understanding of both the challenges faced in control engineering and the insights into the developing of new techniques. With the knowledge obtained readers are encouraged to determine the appropriate control method for specific applications

Applications of Soft Computing for the Web Rashid Ali, MM Sufyan Beg, 2018-01-08 This book discusses the applications of different soft computing techniques for the web based systems and services. The respective chapters highlight recent developments in the field of soft computing applications from web based information retrieval to online marketing and online healthcare. In each chapter author endeavor to explain the basic ideas behind the proposed applications in an accessible format for readers who may not possess a background in these fields. This carefully edited book covers a wide range of new applications of soft computing techniques in Web recommender systems, Online documents classification, Online documents summarization, Online document clustering, Online market intelligence, Web usage profiling, Web data extraction, Social network extraction, Question answering systems, Online health care, Web knowledge management, Multimedia information retrieval, Navigation guides, User profiles extraction, Web based distributed information systems, Web security applications, Internet of Things, Applications and so on. The book is aimed for researchers and practitioner who are engaged in developing and applying intelligent systems principles for solving real life problems. Further it has been structured so that each chapter can be read independently of the others

Advances in Computational Intelligence in Transport, Logistics, and Supply Chain Management Andreas Fink, Franz Rothlauf, 2008 The book at hand presents a careful selection of relevant applications of CI methods for transport logistics and supply chain management problems. The chapters illustrate the current state of the art in the application of CI methods in these fields and should help and inspire researchers and practitioners to apply and develop efficient methods. A few contributions in this book are extended versions of papers presented at EvoTransLog2007, The First European Workshop on Evolutionary Computation in Transportation and Logistics which was held in Valencia Spain in 2007. The majority of contributions are from additional specially selected researchers who have done relevant work in different areas of transport logistics and supply chain management. The goal is to broadly cover representative applications in these fields as well as different types of solution approaches. On the application side the contributions focus on design of traffic and transportation networks, vehicle routing and other important aspects of supply chain management such as inventory management, lot sizing and lot scheduling. On the method side the contributions deal with evolutionary algorithms, local search approaches and

scatter search combined with other CI techniques such as neural networks or fuzzy approaches The book is structured according to the application domains Thus it has three parts dealing with traffic and transportation networks vehicle routing and supply chain management
