The Nature and Practice of Biological Control of Plant Pathogens R. James Cook, 1983 *The Nature and Practice of Biological Control of Plant Pathogens* R. James Cook, Kenneth Frank Baker, 1983 Why biological control Developmental history of biological control of plant pathogens Components of biological control Approaches to biological control The pathogen in biological control The host and biological control The soil ecosystem and biological control Introduction of antagonists for biological control Antagonistae vitae Agricultural practices and biological control Perspectives *Handbook of Biological Control* T. W. Fisher, Thomas S. Bellows, L. E. Caltagirone, D. L. Dahlsten, Carl B. Huffaker, G. Gordh, 1999-09-20 For many years the use of chemical agents such as pesticides and herbicides has been effective in controlling the many varieties of pests that infest both agricultural crops and backyard gardens However these pests are gradually becoming resistant to these agents because the agents themselves are acting as selective factors making the pests better and better able to resist and persist As a result the use of biological controlling agents is increasing This book is a comprehensive and authoritative handbook of biological control **Journal of Biological Control**, 2001 **Recent Developments in Biocontrol of Plant Diseases** K. G. Mukerji, 1992 Theory and Practice of Biological Control Perry L. Adkisson, 1976 Introduction history and ecological basis of biological control the philosophy scope and importance of biological control history of biological control the theoretical and empirical basis of biological control biology and systematics in biological control relationship of systematics to biological control the biology and impact of predators biology and host relationships of parasitoids host relationships and utility of pathogens methodology foreign exploration and importation of natural enemies variation fitness and adaptability of natural enemies conservation and augmentation of natural enemies evaluation of the impact of natural enemies biological control in specific problem areas biological control of pests of coniferous forests biological control of pests of broad leaved forests and woodlands biological control of pests of temperate fruits and nuts biological control of pests of tropical fruits and nuts range forage and grain crops biological control of insect pests of row crops biological control of medical and veterinary pests biological control of weeds biological control among vertebrates biological control of plant pathogens components of integrated control and its implementation the importance of natural enemies in integrated control selective pesticides and selective use of pesticides cultural controls use of plant resistance use of autocidal methods integrated control a realistic alternative to misuse of pesticides biological control of insect pests and weeds by **Handbook of Natural Pesticides: Methods** N. Bhushan Mandava, 2018-04-19 This handbook series includes several naturally occurring chemicals that exhibit biological activity These chemicals are derived from plants insects and several microorganisms Volume I of this series is covers the theory and practice of the strategies for pest control and methods for detection Moreover it presents extensive tables that provide the information you need to select the most appropriate bioassay for a particular plant growth regulator or hormone In addition to the chapters on bioassays Volume I

provides a solid introduction to the theory and practice of natural pesticide use including in depth discussions of integrated management systems for weed and pest control the state of the art use of computers in pest management and allelochemicals as natural protection Guidelines on toxicological testing and EPA regulation of natural pesticides are also detailed **Nematologica** ,1984 **The IPM Practitioner** ,1991 *Soil Biota Management in Sustainable Farming Systems* C. E. Pankhurst,1994 The aim of the workshop on Management of the Soil Biota in Sustainable Farming Systems was to provide insight into the need for and approaches to the development of land use practices that capture and exploit the beneficial activities of the soil biota and soil biotic processes It contains a collection of 27 review papers that cover a range of issues and topics concerned with the management of the soil biota **Proceedings of the 4th Meeting of IUFR0 Working Party 7.03.04 - Diseases and Insects in Forest Nurseries** Arja Lilja,Jack R. Reddy,1997 **Canadian Journal of Microbiology** ,1987-07 **Mathematical model for the biocontrol of vector-borne viral diseases in solanaceous vegetable plants** Timothy Ado Shamaki,2023-03-03 Doctoral Thesis Dissertation from the year 2022 in the subject Mathematics Applied Mathematics Modibbo Adama University of Technology Yola language English abstract This thesis treats the issue of Vector Borne Virus Diseases VBVDs that are transmitted in solanaceous vegetable plants by incorporating three species of vectors aphids thrips and whiteflies A mathematical model was developed that used lady beetles as biological control agents for controlling the spread of diseases in solanaceous vegetable plants through predation The research adopted the linearization method This research is restricted to a biological control of VBVDs of solanaceous vegetable plants using compartmental modeling approach The model is a system of first order nonlinear ODEs Additionally the study is limited to three solanaceous plants i e tomato pepper and eggplant This is because solanaceous plants are among the world s most cultivated crops and given proper conditions and regular maintenance they are relatively easy to grow We focused on viral diseases that affect solanaceous vegetable plants especially Yellow Leaf Curl Virus YLCV Spotted Wilt Virus SWV and Cucumber Mosaic Virus CMV It is a common knowledge that these plant viruses also require some sort of carrier known as vectors to transmit the pathogen from plant to plant Therefore the study is demarcated to a class of aphids green peach aphids thrips T tabasi and whiteflies Bemisia tabasi because these ones are reported as the common problem associated with solanaceous plants which can be controlled by natural predatory enemies ladybugs hippodamia convergens *Microbial Inoculation of Crop Plants* Richard Ewen Campbell,R. M. Macdonald,1989 This book is based on a symposium of the SGM held in April 1988 **Mededelingen** ,1998 The Mycota Karl Esser,Paul A. Lemke,1994 **Australian Journal of Experimental Agriculture** ,2007 Integrated Pest Management Dale G. Bottrell,Council on Environmental Quality (U.S.),1979 Integrated pest management IPM is the selection integration and implementation of pest control based on predicted economic ecological and sociological consequences IPM seeks maximum use of naturally occurring pest controls including weather disease agents predators and

parasites In addition IPM utilizes various biological physical and chemical control and habitat modification techniques Artificial controls are imposed only as required to keep a pest from surpassing intolerable population levels predetermined from accurate assessments of the pest damage potential and the ecological sociological and economic costs of the control measures The presence of a pest species does not necessarily justify action for its control and in fact tolerable infestations may be desirable providing food for important beneficial insects for example **Bulgarian Journal of Agricultural Science** ,2004
