Experiencing approach tackles one of the most difficult and controversial questions of PTSD trauma therapy Can we trust our memories While some argue that traumatic memories are unreliable and not useful others insist that we absolutely must rely on memory to make sense of past experience Building on his 45 years of successful treatment of trauma and utilizing case studies from his own practice Dr Levine suggests that there are elements of truth in both camps While acknowledging that memory can be trusted he argues that the only truly useful memories are those that might initially seem to be the least reliable memories stored in the body and not necessarily accessible by our conscious mind While much work has been done in the field of trauma studies to address explicit traumatic memories in the brain such as intrusive thoughts or flashbacks much less attention has been paid to how the body itself stores implicit memory and how much of what we think of as memory actually comes to us through our often unconsciously accessed felt sense By learning how to better understand this complex interplay of past and present brain and body we can adjust our relationship to past trauma and move into a more balanced relaxed state of being Written for trauma sufferers as well as mental health care practitioners *Trauma and Memory* is a groundbreaking look at how memory is constructed and how influential memories are on our present state of being
