

## database introduction: MySQL Manual

The MySQL database package consists of the following:

**The MySQL server:** This is the heart of MySQL. You can consider it a program that stores and manages your databases.

**MySQL client programs:** MySQL comes with many client programs. The one with which we'll be dealing a lot is called mysql (note: smallcaps). This provides an interface through which you can issue SQL statements and have the results displayed.

**MySQL client Library:** This can help you in writing client programs in C. (We won't be talking about this in our tutorial).

### Creating MySQL database on Windows system

1. Invoke the mysql client program by typing mysql at the prompt.
2. The prompt is changed to a mysql> prompt. Type:

```
create database employees;
```

(Note: The command ends with a semi-colon).

3. The MySQL server responds with something like:  
**Query OK, 1 row affected (0.00 sec)**
4. This means that you have successfully created the database. Now, let's see how many databases you have on your system. Issue the following command.

```
show databases;
```

The server responds with the list of databases.

```
+-----+  
| Database |  
+-----+  
| employees |  
| mysql |  
| test |  
+-----+
```

```
3 rows in set (0.00 sec)
```

Here we have three databases, two created by MySQL during installation and our employees database.

5. To come back to the DOS prompt, type quit at the mysql prompt.
