ExtraSolar Planets – Student Guide

Background Material

Complete the following sections after reviewing the background pages entitled Introduction, Doppler Shift, Center of Mass, and ExtraSolar Planet Detection.

Question 1: Label the positions on the star's orbit with the letters corresponding to the labeled positions of the radial velocity curve. Remember, the radial velocity is positive when the star is moving away from the earth and negative when the star is moving towards the earth.

Question 2: Label the positions on the planet's orbit with the letters corresponding to the labeled positions of the radial velocity curve. Hint: the radial velocity in the plot is still that of the star, so for each of the planet positions determine where the star would be and in which direction it would be moving.

Naap Extrasolar Planet Answer Guide:

Strategy for the Detection and Study of Other Planetary Systems and Extrasolar Planetary Materials National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Planetary and Lunar Exploration, 1990-02-01 This volume addresses a new opportunity in the planetary sciences to extend our exploration outward to discover and study planetary systems that may have formed or are forming around other stars It concludes that a coordinated program of astronomical observation laboratory research theoretical development and understanding of the dynamics and origins of whatever may be found would be a technologically feasible and potentially richly rewarding extension of the study of bodies within the solar system Exploring the Trans-Neptunian Solar System National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Commission on Physical Sciences, Mathematics, and Applications, Committee on Planetary and Lunar Exploration, 1998-05-29 In the last decade our knowledge of the outer solar system has been transformed as a result of the Voyager 2 encounter with Neptune and its satellite Triton and from Earth based observations of the Pluto Charon system However the planetary system does not simply end at the distance of Pluto and Neptune In the past few years dozens of bodies have been discovered in near circular low inclination orbits near or beyond the orbit of Neptune These bodies are now believed to be directly related to each other and to Pluto Charon and Triton and as a class they define and occupy the inner boundary of a hitherto unexplored component of the solar system the trans neptunian region Exploring the Trans Neptunian Solar System reviews current understanding of the trans neptunian solar system and makes recommendations for the future exploration of this distant realm **The Search for Life's Origins** National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Planetary Biology and Chemical Evolution, 1990-02-01 The field of planetary biology and chemical evolution draws together experts in astronomy paleobiology biochemistry and space science who work together to understand the evolution of living systems This field has made exciting discoveries that shed light on how organic compounds came together to form self replicating molecules the origin of life This volume updates that progress and offers recommendations on research programs including an ambitious effort centered on Mars to advance the field over the next 10 to 15 years The book presents a wide range of data and research results on these and other issues The biogenic elements and their interaction in the interstellar clouds and in solar nebulae Early planetary environments and the conditions that lead to the origin of life The evolution of cellular and multicellular life The search for life outside the solar system This volume will become required reading for anyone involved in the search for life s beginnings including exobiologists geoscientists planetary scientists and U S space and science policymakers **Frontiers in High Energy Density Physics** National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Plasma Science Committee, Committee on High Energy Density Plasma Physics, 2003-05-11 Recent scientific and technical advances have made it possible to create matter in the laboratory under

conditions relevant to astrophysical systems such as supernovae and black holes These advances will also benefit inertial confinement fusion research and the nation's nuclear weapon's program The report describes the major research facilities on which such high energy density conditions can be achieved and lists a number of key scientific questions about high energy density physics that can be addressed by this research Several recommendations are presented that would facilitate the development of a comprehensive strategy for realizing these research opportunities

Extrasolar Planets Patrick Cassen, Tristan Guillot, A. Quirrenbach, 2007-05-17 Research on extrasolar planets is one of the most exciting fields of activity in astrophysics In a decade only a huge step forward has been made from the early speculations on the existence of planets orbiting other stars to the first discoveries and to the characterization of extrasolar planets This breakthrough is the result of a growing interest of a large community of researchers as well as the development of a wide range of new observational techniques and facilities Based on their lectures given at the 31st Saas Fee Advanced Course Andreas Quirrenbach Tristan Guillot and Pat Cassen have written up up to date comprehensive lecture notes on the Detection and Characterization of Extrasolar Planets Physics of Substellar Objects Interiors Atmospheres Evolution and Protostellar Disks and Planet Formation This book will serve graduate students lecturers and scientists entering the field of extrasolar planets as detailed and comprehensive introduction

Extrasolar Planets Hans Deeg, Juan Antonio Belmonte, Antonio Aparicio, 2007-10-18 This 2007 volume presents the lectures from the sixteenth Winter School of the Instituto de Astrofísica de Canarias which was dedicated to extrasolar planets Research into extrasolar planets is one of the most exciting fields of astrophysics and the past decade has seen a research leap from speculations on the existence of planets orbiting other stars to the discovery of around 200 planets to date The book covers a wide range of issues from the state of the art observational techniques used to detect extrasolar planets to the characterizations of these planets and the techniques used in the remote detection of life It also looks at the insights we can gain from our own Solar System and how we can apply them The contributors all of high standing in the field provide a balanced and varied introduction to extrasolar planets for research astronomers and graduate students bridging theoretical developments and observational advances

Extrasolar Planets and Astrobiology Caleb A. Scharf, 2009 This book offers an advanced introduction to the increasingly robust fields of extrasolar planets and astrobiology This book offers an advanced introduction to the increasingly robust fields of extrasolar planets and astrobiology No other text currently available applies this level of mathematics and physics while also providing an extensive grounding in key issues of chemistry biology and geophysics With extensive references to the literature and chapter ending exercises this book can be used as the core text for teaching undergraduate or introductory graduate level courses The text will also provide astrobiologists with an indispensable User's Manual when quick reference to key mathematical and physical techniques is needed A continually updated online component fully cross referenced with the text is also available Foreword by Geoff Marcy

Extra-Solar Planets Bonnie Steves, Martin Hendry, Andrew C. Cameron, 2010-12-07 Since the discovery of the first

exoplanet orbiting a main sequence star in 1995 nearly 500 planets have been detected with this number expected to increase dramatically as new ground based planetary searches begin to report their results Emerging techniques offer the tantalizing possibility of detecting an Earth mass planet in the habitable zone **Extrasolar Planets** Stuart G.

Clark,1998-11-24 Provides an overview of the developments in the search for planetary sized bodies orbiting Sun like stars Discusses the formation and evolution of stars and the processes leading to the formation of protoplanetary discs

planetesimals embryonic planets and complete planetary systems Also examined are the techniques currently being employed for the detection of extrasolar planets and the results of those searches as well as the theoretical problems posed by giant planets with small orbital radii and those in eccentric orbits brown dwarfs and the possible planets around pulsars The final chapter speculates on finding habitable and inhabited worlds Annotation copyrighted by Book News Inc Portland OR

OR Exoplanets and Alien Solar Systems Tahir Yaqoob,2011 An unprecedented number of planets outside of the solar system have been found with an explosion in the number of discoveries in recent years Find out what has been happening in this rapidly advancing arena of human exploration what these extrasolar planets are like and why some traditional ideas face being thrown out **The Search for Extrasolar Planets** Volker Neise,2009 The New Worlds Fabienne Casoli,Therease

Encrenaz,2007-04-25 Offering an engaging and complete story of the hunt for new worlds this volume fully details the detection and exploration of extrasolar planets It examines the very wide range of extrasolar planets that have been discovered during the past ten years and looks at what can be learned about such planets by studying the bodies in our own solar system It also discusses the formation of planetary systems the way in which such systems may evolve and the final systems of planets that result In addition the authors demonstrate how life might evolve on an extrasolar planet and how such life might be detected The Exoplanet Handbook M. A. C. Perryman,2011 Exoplanet research is one of the most

explosive subjects in astronomy today More than 500 exoplanets are now known and groups world wide are actively involved in a broad range of observational and theoretical efforts This book ties together these many avenues of investigation from the perspectives of observation technology and theory to give a comprehensive up to date review of the entire field All areas of exoplanet investigation are covered making it a unique and valuable guide for researchers in astronomy and planetary science including those new to the field It treats the many different techniques now available for exoplanet detection and characterisation the broad range of underlying physics the overlap with related topics in solar system and Earth sciences and the concepts underpinning future developments It emphasises the interconnection between the various fields and provides extensive references to more in depth treatments and reviews
