Using Children's Literature Across the Curriculum Catherine M. O'Callaghan, 2011 This resource uniquely offers preservice and inservice teachers templates for using quality children's literature to implement six themes across grades K-8. The themes are based on national curriculum standards and text sets are carefully selected to facilitate discussion analysis and problem solving across the grades. *Using Children's Literature Across the Curriculum* provides teachers with a guide to using multilayered texts to facilitate students' attainment of critical literacy. It is designed to be a supplemental text to guide teachers in designing literacy instruction. The instructional sequence includes collaborative inquiry activities across the curriculum to extend each theme to math, science, technology, and social studies. Teachers are shown how to incorporate family literacy with a component entitled *Home School Connections* and to differentiate instruction for individual learners with a section entitled *On Your Own Activities*. The theme concludes with a critical literacy activity that applies the content knowledge of the theme with collaborative inquiry. A unique feature of the handbook is the emphasis on performance-based assessment with each instructional sequence containing two rubrics for the teacher to implement. The instructional sequences are meant as models for teachers to use in developing their own themes in order to facilitate critical literacy. These models can be adjusted to fit the reading level of the students as teachers become more familiar with the text's structure and their students' needs.

Encyclopedia of Genetics, Genomics, Proteomics and Bioinformatics, 8 Volume Set Michael J. Dunn, Lynn B. Jorde, Peter F. R. Little, Shankar Subramaniam, 2005-11-11 Available in print and online this unique reference brings together all four fields of genetics, genomics, proteomics, and bioinformatics to meet your dynamic research requirements. It brings together the latest concepts in these vibrant areas and ensures a truly multidisciplinary approach. Topics include genetic variation and evolution, epigenetics, the human genome, expression profiling, proteome families, structural proteomics, gene finding, gene structure, protein function and annotation, and more. The work incorporates a vast amount of topical information, profiles cutting-edge techniques, and presents the very latest findings from an international team of over five hundred contributors. With articles for both students and more experienced scientists, this is a key reference source for everyone. Contains more than 450 articles covering all aspects of genomics, proteomics, bioinformatics, and related technologies. Includes a glossary containing over 550 clear and concise definitions. I am pleased to recommend it heartily as an essential reference tool. Should remain the definitive work for many years to come.

THE CHEMICAL EDUCATOR Jorde and co editors have done a remarkable job in coordinating this information, distilling it into a package that is both easy to navigate and overflowing in discovery.
