## N2 Wonderland The From Calabi Yau Manifolds To Topological Field Theories:

**The N P. Fr[],Paolo Soriani,1995** This book presents in a unifying perspective the topics related to N 2 supersymmetry in two dimensions Beginning with the K hler structure of D 4 supergravity Lagrangians through the analysis of string compactifications on Calabi Yau manifolds one reaches the heart of the matter with the chiral ring structure of N 2 conformal field theories and its relation to topological field theory models and Landau Ginzburg models In addition mirror symmetry topological twists and Picard Fuchs equations are discussed

*Quaternionic Structures in Mathematics and Physics* Stefano Marchiafava,Paolo Piccinni,Massimiliano Pontecorvo,2001 During the last five years after the first meeting on OC Quaternionic Structures in Mathematics and PhysicsOCO interest in quaternionic geometry and its applications has continued to increase Progress has been made in constructing new classes of manifolds with quaternionic structures quaternionic Knhler hyper Knhler hyper complex etc studying the differential geometry of special classes of such manifolds and their submanifolds understanding relations between the quaternionic structure and other differential geometric structures and also in physical applications of quaternionic geometry Some generalizations of classical quaternion like structures like HKT structures and hyper Knhler manifolds with singularities appeared naturally and were studied Some of those results are published in this book Contents Hypercomplex Structures on Special Classes of Nilpotent and Solvable Lie Groups M L Barberis Twistor Quotients of HyperKnhler Manifolds R Bielawski Quaternionic Contact Structures O

*Naturalness, String Landscape and Multiverse* Arthur Hebecker,2021-03-26 This book presents a string theoretic approach to new ideas in particle physics also known as Physics Beyond the Standard Model and to cosmology The concept of Naturalness and its apparent violation by the low electroweak scale and the small cosmological constant is emphasized It

is shown that string theory through its multitude of solutions known as the landscape offers a partial resolution to these naturalness problems as well as suggesting more speculative possibilities like that of a multiverse The book is based on a one semester course as such it has a pedagogical approach is self contained and includes many exercises with solutions Notably the basics of string theory are introduced as part of the lectures These notes are aimed at graduate students with a solid background in quantum field theory as well as at young researchers from theoretical particle physics to mathematical physics This text also benefits students who are in the process of studying string theory at a deeper level In this case the volume serves as additional reading beyond a formal string theory course

### **N = 2 Supergravity in D = 4, 5, 6 Dimensions**

Edoardo Lauria,Antoine Van Proeyen,2020-03-11 This graduate level primer presents a tutorial introduction to and overview of N 2 supergravity theories with 8 real supercharges and in 4 5 and 6 dimensions First the construction of such theories by superconformal methods is explained in detail and relevant special geometries are obtained and characterized Following the relation between the supergravity theories in the various dimensions is discussed This leads eventually to the concept of very special geometry and quaternionic K hler manifolds This concise text is a valuable resource for graduate students and young researchers wishing to enter the field quickly and efficiently
