These are the sort of questions about spatial orientation with which this book is concerned. Staying spatially oriented is a pervasive aspect of all behavior. Animals must find their way through their environment searching efficiently for food and returning to their home areas and many species have developed very sophisticated sensing apparatus for helping them do this. Even little children know their way around quite complex environments. They remember where they put things and are able to retrieve them with little trouble. Adults in societies across the world have developed complex navigational systems for helping them find their way over long distances with few distinctive landmarks. People across the world use their languages to communicate about spatial orientation in problems of simple direction giving and spatial descriptions as well as problems of long range navigation.
