Nanoscience Colloidal And Interfacial Aspects Surfactant Science:

Nanoscience Victor M. Starov, 2010-06-15 Bringing together a prominent roster of 42 leading investigators and their teams this volume details the wide range of theoretical and experimental knowledge that can be successfully applied for investigating nanosystems The book provides researchers with a full examination of nano disperse colloids homogeneous and heterogeneous nano structured materials and their properties and shelf organization at the nano scale It explores non linear electrokinetic phenomena in nano sized dispersions and nano sized biological systems It discusses application aspects of technological processes in great detail offering scientists and engineers across all fields authoritative commentary on colloid and interface science operating at the nanoscale

Colloids in Biotechnology Monzer Fanun, 2010-09-17 Colloids show great potential in a wide variety of applications including drug delivery and medical imaging and the design and fabrication of colloid systems has attracted considerable interest in the research community Colloids in Biotechnology describes developments in the field of biotechnological applications in the past decade and bridges to

Colloid and Interface Chemistry for Nanotechnology Peter Kralchevsky, Reinhard Miller, Francesca Ravera, 2016-04-19 Colloid and interface science dealt with nanoscale objects for nearly a century before the term nanotechnology was coined An interdisciplinary field it bridges the macroscopic world and the small world of atoms and molecules Colloid and Interface Chemistry for Nanotechnology is a collection of manuscripts reflecting the activities of research teams

Characterization of Nanomaterials in Liquid Disperse Systems R. R. Retamal Marín, 2022-04-22 This book describes different aspects of characterization and detection of nanomaterials in liquid disperse systems such as suspensions emulsions and suspoemulsions Natural and technical particulate nanomaterials NMs are often present in formulations and products consisting of several disperse phases and complex dispersion media Specific interfacial properties of the particles their interactions with each other and with the dispersion medium have to be considered For example the interfacial properties determine whether the particles tend to be arranged in aqueous or lipid phases or at their phase boundaries The interfacial properties are significantly influenced by the adsorption of dissolved species i.e. they depend on the composition of the dispersion medium This poses great challenges for the characterization of these nanoparticle systems and requires adequate preparation methods The nanoparticle measurement techniques aim at a deep physico chemical understanding of the dispersity state of nanoparticle systems Since the dispersity state of nanoparticle systems in an application usually does not correspond to their original manufacturing process the formulation of new or improved product properties is of decisive importance The characterization of nanoparticles in complex formulations or matrices requires an adequate sample preparation based on an existing or yet to be developed Standard Operating Procedure SOP The structure of the SOPs includes the dispersion regulations which are of essential importance for comparing reproducible results of nanoparticle measurement with respect to comparability and transferability worldwide The aim is to separate and isolate relevant NMs with knowledge of the interrelationships
