## WARRANTY NOTICE

The International Harvester Warranty on these engines applies when their operation shall not apply to any failure that results from an unauthorized adjustment of the fuel injection system.

Any attempt to increase the engine horsepower by increasing engine rpm above its rated maximum, or by other means, not only affects traveling speeds but affects the life of working parts and voids the company responsibility as outlined in the warranty.

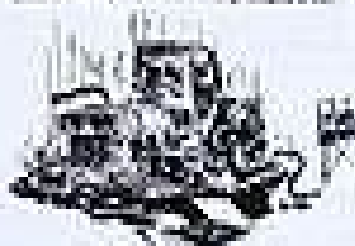

## FUEL SYSTEM

Grade 2-D diesel fuel conforming to all the SAE specifications must be used for proper operation of these tractors. Grade 2-D diesel fuel may be used at temperatures below +10°F (-12.2°C) or for operating existing compressors (if any). Use only winter grade fuel for start of starting. Winter grade diesel fuel must have a cloud point of at least +10°F (-12.2°C) below the lowest anticipated temperature to avoid plugging of the fuel circulation system, especially the fuel lines.

## Using the Fuel Tank

Do not add gasoline or kerosene to diesel fuel. This creates a vapor which is extremely explosive.

**CAUTION NEVER SMOKES** while refueling. Shut off engine and electrical equipment.

10-1000

**CAUTION** Never remove the fuel tank cap or fill the fuel tank near an open flame. Do not smoke when working around inflammable fuel.

## FUEL AND FUEL SYSTEM

At the bottom of the end of each day run an engine checkup.

**NOTE:** Do not fill the tank to its full capacity. Space is required for water expansion at the onset of a temperature change. A tank filled to capacity may become if exposed to a rise in temperature or direct sunlight.

Be sure that the fuel tank is properly secured before starting the engine.

## Draining Water from the Fuel Tank

Before starting each day's work, drain the water from the fuel tank.

The fuel tank water drain valve on tractors without auxiliary fuel tank is located on the left bottom of the fuel tank and marked with auxiliary fuel tank is located on the left front side of the auxiliary fuel tank.

Allow time for water and sediment to settle to the bottom of the tank. Open the valve and drain the tank until uncontaminated fuel remains. Close the valve.

## Testing the Fuel System

All air must be eliminated from the fuel lines before the engine will start and operate properly. All gauges and fuel line connections must be tight to prevent leakage and to prevent air from entering the fuel system.

The system must be vented under the following circumstances:

Before starting an engine which has not been operated for an extended period of time. When the fuel lines have been replaced. When an engine is replaced with a new fuel tank. When any connections between the shut-off pump and fuel tank have been loosened or broken for any reason.

To vent the fuel system proceed as follows:

## On 288 Tractors

288 Tractors with 5-338 Engine without auxiliary fuel tank.

Open the fuel tank shut-off valve. Loosen the vent screw on the fuel filler with the fuel draining from the filler is free from air bubbles. Tighten the vent screw.
