Payment systems : design, governance and oversight Bruce J. Summers, 2012 *Analyzing the Economics of Financial Market Infrastructures* Diehl, Martin, Alexandrova-Kabadjova, Biliana, Heuver, Richard, Martínez-Jaramillo, Serafin, 2015-08-17

The prosperity and stability of any economic structure is reliant upon a foundation of secure systems that regulate the movement of money across the globe. These structures have become an integral part of contemporary society by reducing monetary risk and increasing financial security. *Analyzing the Economics of Financial Market Infrastructures* is a pivotal reference source for the latest scholarly research on the current developments in financial systems and how these processes are evolving due to new regulations and technical advances. Featuring extensive coverage on a range of relevant topics on payment systems, central securities depositories, central counterparties, and trade repositories, this book is an essential reference source for professionals in the financial sector, analysts, IT professionals, and academicians concerned with emerging research on financial markets. This book features timely research-based chapters on a variety of crucial topics, including but not limited to payment timing, multi-layer networks, transaction simulations, payment system analysis, and regulation of financial marketplaces.

Digital Currency Fouad Sabry, 2021-11-25

What Is Digital Currency? While all cryptocurrencies can be termed as digital currencies, the reverse is not true. Cryptocurrencies are managed by a computer algorithm, while digital currencies are backed by an authority. Now, digital currencies exhibit properties like other currencies but do not have a physical form like that of banknotes and coins. You can receive transfer and/or exchange digital currency for another currency. For example, it can be used to pay for goods and services in an online store. Cryptocurrencies like Bitcoin and Ethereum are pieces of computer code that are not managed by any authority. Creation as well as use is maintained through a distributed ledger, typically a blockchain, that serves as a public financial transaction database. So, cryptocurrencies typically use decentralized control where there is no presence of a third party to have authority over the investor. One of the most significant differences between digital currency and cryptocurrency is the underlying technology. Digital currency is a digital format of fiat money, whereas cryptocurrencies are built on the blockchain. Cryptocurrencies are not under the control of any single entity. Digital currency, however, is under the direct control of the central bank. When it comes to digital currency, the issuing authority is of prime importance.
