

COLD WEATHER STARTING

When starting under cold weather conditions it is important that the starter key be held in the 'start' position continuously until the engine starts. This allows heat to build-up in the combustion chambers. At very low temperatures it may be necessary to hold the key in position for up to 25-40 seconds. Do NOT operate the key in a series of short jabs. If the engine does not start after 40 seconds, allow 4-5 minutes for the battery to recover then repeat the starting procedure.

As a further aid to cold starting, the Ford 3000 and Ford 5000 are fitted with an excess fuel button, Figure A5, on the side of the fuel injection pump. This button should be depressed prior to starting the tractor and will be automatically disengaged when the engine fires. If the engine does not continue to run the button must be depressed again before another attempt is made to start the engine. Optional starting aids are available for extreme cold conditions and details of these are given in Section 'H'.

DRIVING THE TRACTOR

For fuel economy and minimum engine wear it is important to select the correct gear for a particular operation.

To drive the tractor select the desired gear using the gear change and high/low gear shift levers, Figure A6, in conjunction with the decal below the instrument cluster.

Engage the clutch whilst increasing the engine speed slightly. The clutch pedal should not be used as a footrest as prolonged 'riding' of the clutch may cause damage.

To stop the tractor depress the clutch and apply both brake pedals, (11) Figure A4 and place the main and the high/low gear shift levers in the 'Neutral' position. Apply the handbrake situated on the left-hand side, (12) Figure A4, of the tractor seat on the Ford 2000 and 3000, and on the right-hand side of the seat on the Ford 4000 and 5000. Pull out the engine stop control and turn the starter key anti-clockwise, (6) Figure A4, to the 'off' position.
