Citizen Science in Southern European Archaeology Jesús Bermejo Tirado, Mattia Sanna Montanelli, Antonio Giorri, 2025-06-30 This book presents a valuable exploration of the potential for citizen science in archaeology within southern Europe. The examination of citizen science in archaeology has been heavily influenced by case studies and theories from Anglophone countries where a distinctive policy and social framework exists. However, there is currently a notable absence of consideration on the subject in the Mediterranean context. This book, through an examination of the strengths and limitations of citizen science in southern Europe, provides fresh insights and perspectives that inform the development of more effective citizen science projects in southern Europe and beyond. It seeks not only to explore the region in question but also to facilitate cross-cultural and international collaboration and promote a greater understanding of the role of citizen science in diverse contexts. The chapters feature different study approaches, legal conceptions, case studies from Spain, Italy, and Greece, methodological, technical, and critical approaches, and updates of the citizen science literature, providing readers with diverse perspectives. As the first volume about citizen science in archaeological research and practice in Southern Europe, this book is for researchers in and practitioners of citizen science archaeology and Mediterranean Studies.

**Handbook of Citizen Science in Ecology and Conservation** Christopher Andrew Lepczyk, Owen D. Boyle, Timothy L. V. Vargo, 2020. *Handbook of Citizen Science in Ecology and Conservation* is the first practical and comprehensive manual that provides step-by-step instructions for creating natural science research projects that involve collaboration between scientists and the general public. As citizen science projects become increasingly common, there is a growing need for concrete best practices around planning and implementing successful projects that can allow project leaders to guide and gauge success of projects while ensuring the collection of high-quality data. Based on a variety of case studies from several citizen science projects, this is the definitive reference guide for all potential citizen science practitioners, ranging from professors and graduate students to staff at agencies and nongovernmental organizations.

Ethnography in the Open Science and Digital Age: New Debates, Dilemmas, and Issues Colin Jerolmack, Alexandra Murphy, Victoria Reyes, 2024-06-19. In the current moment, ethnography is caught up in a number of debates that have led ethnographers to reflect on classic methodological and ethical dilemmas in new ways. The replication crisis has led to a movement for open science, e.g., registering hypotheses in advance, sharing codes and data, but it seems unclear that recommended best practices are appropriate to ethnography. It's even up for debate whether ethnography is more of a social science or a genre. The fact that many ethnographies are widely read invites questions and criticisms from beyond the ivory tower, including our subjects about the ethics of representation, e.g., who has license to write about whom and the extent to which journalistic standards of data verification and transparency, e.g., fact checking, naming sources, should apply to qualitative research. Some ethnographers are calling for more open, critical discussions about the embodied dimensions of fieldwork, including not only emotions but also issues like sexual intimacy and

harassment There s also a growing expectation that ethnographers empower our subjects to represent and analyze themselves What s more as more of social life is lived online it becomes increasingly unclear where the boundaries of the field site should be drawn and whether ethnographic conventions can be applied wholesale to the study of digital spaces
