*First Delivery Gaps* Georgia Perakis, Divya Singhvi, 2019 With the rise of online retail in recent years one of the key challenges that retailers face is product returns Each year products worth billions of dollars are returned for various reasons including product quality packaging delivery delays and others Working with one of India s largest online fashion retailers we focus on identifying whether increased delivery gaps lead to an increase in Returns To Origin RTO orders That is the setting where customer refuses to accept the delivered package and pay for it at the door step when delivered Given the cost of returns that retailers experience is double namely sending the order to the customer and then shipping it back to the warehouse mitigating RTO is an important problem We investigate the problem of RTOs with a supply chain lens and show the causal effect of delivery gaps time to deliver a product on RTOs In order to show the causal effect of delivery gaps on RTOs and address endogeniety concerns prevalent in observational data we use the instrumental variables approach Then we formulate the problem of optimally choosing strategic and tactical delivery threshold targets We show that there can be substantial gains from carefully balancing RTO costs with faster deliveries We show that for our industry partner a 2 day reduction in the delivery gap from the current average can lead to annual cost savings of up to 1.8 million just from RTO reduction We also perform a Randomized Control Trial to test the hypothesis of whether customer promise can be used as a lever for RTO reduction in regions where product deliveries are already expedited We find that textit beating customer promise by overshooting delivery dates can further lead to a reduction in product RTO Reducing product returns is one of the most important problems in modern retail By showing the causal relationship between RTOs and delivery gaps we identify a supply chain lever that can reduce RTOs Furthermore the novel framework we introduce optimizes delivery gaps for retailers while at the same time accounting for various delivery improvement costs
